1. STATUTORY AUDITOR'S CERTIFICATION

**STATUTORY AUDITOR'S REPORT
ON THE ANNUAL FINANCIAL STATEMENTS
Financial year ended 31 December 2024**

CARMIGNAC SECURITE
UCITS IN THE FORM OF A FRENCH MUTUAL FUND (FCP)
Governed by the French Monetary and Financial Code

Management company
CARMIGNAC GESTION
24, place Vendôme
75001 PARIS

Opinion

As appointed by the management company, we have audited the annual financial statements of the CARMIGNAC SECURITE UCITS, established as a French mutual fund (FCP), for the financial year ended 31 December 2024, as they are appended to this report.

In our opinion, the annual financial statements give, in accordance with French accounting rules and principles, a true and fair view of the financial position and assets and liabilities of the fund and of the results of its operations at the end of the financial year.

Basis for our opinion

Audit framework

We conducted our audit in accordance with the professional auditing standards applicable in France. We believe that the evidence gathered is pertinent and sufficient to serve as a basis for our opinion. Our responsibilities in light of these standards are described in this report in the section entitled "Responsibilities of the statutory auditor in relation to auditing the annual financial statements".

Independence

We carried out our audit in accordance with the independence rules set out in the French Commercial Code and the Code of Ethics for Statutory Auditors, for the period from 30 December 2023 to the date on which our report was issued.

CARMIGNAC SECURITE

Observation

Without casting doubt on the opinion expressed above, we draw your attention to the change in accounting methods described in the notes to the financial statements.

Justification of the evaluations

In accordance with the provisions of Articles L.821-53 and R.821-180 of the French Commercial Code in relation to the justification of our evaluations, we wish to highlight that the evaluations which, in our professional opinion, were the most significant in our audit of the annual financial statements, concerned the appropriateness of the accounting principles applied and the reasonableness of the significant estimates made and the overall presentation of the financial statements.

The evaluations were made in the context of the audit of the annual financial statements, taken as a whole, and the formation of the opinion expressed herein. We offer no opinion on parts of these annual financial statements taken in isolation.

Specific verifications

We have also carried out the specific verifications required by laws and regulations in accordance with the professional auditing standards applicable in France.

We have no comment as to the fair presentation and conformity with the annual financial statements of the information given in the management report drawn up by the management company.

Information resulting from other legal and regulatory obligations

In accordance with the law, we drew your attention in our certifications on the composition of assets dated 28 March 2024 and 28 June 2024 to the notes to the financial statements on the composition of assets, describing the valuation of financial instruments exposed to Russia. These securities represented 0.81% of the fund's assets on 28 March 2024 and 0.75% of the fund's net assets on 28 June 2024.

Offices: Bordeaux, Grenoble, Lille, Lyon, Marseille, Metz, Nantes, Nice, Paris, Poitiers, Rennes, Rouen, Strasbourg, Toulouse.

CARMIGNAC SECURITE

Responsibilities of the management company regarding the annual financial statements

The management company is required to prepare annual financial statements that present a true and fair image, in accordance with French accounting rules and principles, and to establish the internal control measures that it deems necessary for producing annual financial statements free of material misstatement, whether due to fraud or error.

When producing the annual financial statements, it is incumbent on the management company to assess the ability of the fund to continue operating, and where appropriate to include the necessary information on business continuity, and apply the going concern accounting policy unless there are plans to liquidate the fund or cease trading.

The annual financial statements were prepared by the management company.

Responsibilities of the statutory auditor when auditing the annual financial statements

Audit objective and approach

We are required to produce a report on the annual financial statements. Our aim is to gain reasonable assurance that the annual financial statements taken as a whole are free of material misstatement. Reasonable assurance means a high level of assurance, albeit without any guarantee, that an audit carried out in accordance with industry standards could systematically detect every material misstatement. Misstatements may arise from fraud or error, and are considered to be material when one could reasonably expect them, either individually or cumulatively, to influence the financial decisions that readers make as a result.

As stipulated in Article L821-55 of the French Commercial Code, our role as auditors is not to guarantee the viability or quality of management of the fund.

A statutory auditor exercises its professional judgement throughout any audit performed in accordance with professional standards applicable in France. Furthermore:

- It identifies and evaluates the risk that the annual financial statements may include material misstatement, whether resulting from fraud or error, defines and implements auditing procedures in response to these risks, and gathers the items it deems sufficient and appropriate as a basis for its opinion. The risk of material misstatement not being detected is considerably higher when it is the result of fraud rather than error, since fraud may involve collusion, falsification, voluntary omissions, false declarations or the circumvention of the internal control system;

*PricewaterhouseCoopers Audit, 63, rue de Villiers, 92208 Neuilly-sur-Seine Cedex
T: +33 (0) 1 56 57 58 59, F: +33 (0) 1 56 57 58 60, www.pwc.fr*

- It assesses the internal control system that is relevant for the audit in order to define audit procedures that are appropriate in the circumstances, and not for the purpose of expressing an opinion on the internal control system;
- It evaluates the appropriateness of the accounting methods used and the reasonableness of the accounting estimates made by the management company, as well as the related information in the annual financial statements;
- It evaluates the appropriateness of the management company's application of the going concern accounting principle and, based on the information gathered, the existence or absence of significant uncertainty linked to events or circumstances likely to cast doubt on the fund's ability to continue its operations. This evaluation is based on the information gathered prior to the date of its report; however, it should be noted that subsequent circumstances or events may cast doubt on the continuity of its operations. If it concludes that there is a material uncertainty, it draws readers' attention to the information provided in the annual financial statements regarding this uncertainty, or if such information is not provided or not relevant, it certifies the accounts with reservations, or refuses to certify them;
- It assesses the presentation of all of the annual financial statements and evaluates whether or not the annual financial statements depict the underlying operations and events fairly.

We were unable to meet the regulatory deadline for this report because some of the documents needed for us to complete our work were sent late.

2. FEATURES OF THE FUND

2.1 CLASSIFICATION

Bonds and other debt securities denominated in euro.

2.2 DETERMINING AND ALLOCATING DISTRIBUTABLE INCOME

Distributable income	"Acc" units	"Dis" units
Allocation of net income	Accumulation (dividends are recorded on an accruals basis)	Distributed or carried forward as decided by the Management Company
Allocation of net realised capital gains or losses	Accumulation (dividends are recorded on an accruals basis)	Distributed or carried forward as decided by the Management Company

2.3 COUNTRIES IN WHICH THE FUND IS AUTHORISED FOR DISTRIBUTION

AW EUR Acc units: Austria, Belgium, Switzerland, Germany, Spain, France, Ireland, Italy, Luxembourg, Netherlands, Portugal, Sweden and Singapore.

AW EUR Ydis units: Austria, Switzerland, Germany, Spain, France, Italy, Luxembourg, Netherlands, Sweden and Singapore.

AW USD Acc Hdg units: Austria, Belgium, Switzerland, Germany, Spain, France, Italy, Luxembourg, Sweden and Singapore.

Z EUR Acc units: France.

2.4 INVESTMENT OBJECTIVE

The fund's objective is to outperform its reference indicator over a recommended investment horizon of two years.

The fund seeks to invest sustainably and applies a socially responsible investment approach. The ways in which the socially responsible investment approach is followed are described in the "Environmental and/or social characteristics" annex below, and can be found at www.carmignac.com.

2.5 REFERENCE INDICATOR

The reference indicator is the ICE BofA 1-3 Year All Euro Government Index calculated with coupons reinvested (E1AS). This index tracks the performance of sovereign debt denominated in EUR publicly issued by Eurozone Member States on the euro bond market or the issuer's domestic market, with a residual period remaining to the final maturity of under three years. It is calculated with coupons reinvested.

The fund's reference indicator has not been entered in the register kept by ESMA since 1 January 2021, although this has no effect on its use by the fund, in accordance with ESMA position 80-187-610. The management company may replace the reference indicator if it undergoes substantial modifications or ceases to be published. For any additional information on the index, please refer to the provider's website: <https://indices.theice.com/>

This fund is an actively managed UCITS. An actively managed UCITS is one where the investment manager has discretion over the composition of its portfolio, subject to the stated investment objectives and policy. The fund's investment universe is at least partly derived from the reference indicator. The fund's investment strategy is not dependent on the reference indicator. Therefore, the fund's holdings and the weightings may substantially deviate from the composition of the indicator. There is no limit set on the level of such deviation.

2.6 INVESTMENT STRATEGY

2.6.1 MAIN FEATURES OF THE MANAGEMENT OF THE UCITS

Modified duration range	(-3 ; 4)
Geographic area of securities issuers	All regions

Modified duration is defined as the change in portfolio capital (as %) for a change in interest rates of 100 basis points.

The range of sensitivity of your fund to credit spreads may vary significantly from the modified duration range referred to above, owing in particular to investments on the credit market.

2.6.2 STRATEGIES USED

The fund aims to outperform the reference indicator by exposing the portfolio to interest rates in the Eurozone and, occasionally, to interest rates outside the Eurozone, and by exposing the portfolio to international credit markets through investments in debt securities or money market instruments issued by international governments and corporations, or through derivatives.

The fund is free to vary its foreign exchange market exposure within the limit of 10% of the net assets.

As the fund is managed on a flexible, active basis, its asset allocation may differ substantially from that of its reference indicator. In the same way, the fund's modified duration may differ substantially from that of its reference indicator (within the range defined above).

The investment strategy is based largely on the manager's analysis of the yield spread between different maturities (yield curves), between different countries and between the different ratings of bonds offered by corporate and public issuers. The selection criteria for bonds are therefore based on the issuing company's fundamentals and the evaluation of quantitative factors such as the yield premium they offer compared to government bonds.

Fixed income strategy:

Investments on fixed income markets are chosen on the basis of expected international economic scenarios and an analysis of the various central banks' monetary policies. This determines the fund's overall modified duration. The portfolio's modified duration may vary from -3 to +4.

The fund mostly invests on Eurozone markets but occasionally on international markets.

These investments on fixed income markets are determined by:

- The allocation of modified duration between the different fixed income markets;
- The allocation of modified duration between the different segments of the yield curve.

Credit strategy:

Investments on credit markets are chosen on the basis of expected international macroeconomic scenarios and financial research into issuers' solvency. This determines the fund's overall level of credit exposure. The fund invests on all international markets.

These investments on credit markets are determined by:

- Selecting securities on the basis of an internal analysis, itself largely based on profitability, creditworthiness, liquidity, maturity and, for distressed issuers, the prospect of recovering the investment,
- Government/corporate debt allocation,
- The credit allocation to debt securities and public or private money market instruments or corporate bonds according to rating, sector, subordination.

Foreign exchange strategy:

The portfolio manager's decisions regarding exposure to the foreign exchange market are made on the basis of a global macroeconomic analysis, in particular of the outlook for growth, inflation and monetary and fiscal policy of the different economic zones and countries. This determines the fund's overall level of currency exposure. The fund invests on all international markets. These investments on the foreign exchange market, which depend on expectations of changes in different currencies, are determined by:

- The currency allocation across the various regions through exposure generated by directly held securities denominated in foreign currencies,
- The currency allocation between the various regions directly through currency derivatives.

The investment universe for all strategies includes emerging countries.

The portfolio continuously respects the 30% limit on cumulative net exposure to credit derivatives (for exposure), contingent convertible bonds, currency risk and any other high yield bond instrument.

2.7 DESCRIPTION OF ASSET CATEGORIES AND FINANCIAL CONTRACTS AS WELL AS THEIR CONTRIBUTION TO THE INVESTMENT OBJECTIVE BEING ACHIEVED

2.7.1 EQUITIES

None.

2.7.2 DEBT SECURITIES AND MONEY MARKET INSTRUMENTS

The fund is predominantly invested in (short- and medium-term) negotiable debt securities, money market instruments, fixed or floating rate bonds (covered and uncovered) and/or inflation-linked bonds in Eurozone countries. The fund may invest in corporate or government issuers.

It may invest up to 20% of its assets in securities denominated in a currency other than the euro, though the fund's exposure to non-euro interest rate and currency risk remains ancillary.

The weighted average rating of the debt instruments held directly by the fund or through investment in funds shall be at least investment grade according to at least one of the major rating agencies. However, the fund reserves the right to invest in "high yield" bonds issued by corporate and sovereign issuers up to a limit of 10% of net assets for each category of issuer.

Up to 10% of the fund's assets may be invested in securitisation instruments. The instruments concerned are mainly Asset-Backed Securities (ABS), Enhanced Equipment Trust Certificates (EETC), Residential Mortgage-Backed Securities (RMBS), Commercial Mortgage-Backed Securities (CMBS) and Collateralised Loan Obligations (CLO).

For all of these assets, the management company will carry out its own analysis of the risk/reward profile of the securities (profitability, creditworthiness, liquidity, maturity). As a result, the decision to buy, hold or sell a security (particularly where the rating has changed) is not solely based on the rating criteria, but also reflects an internal analysis of credit risks and market conditions carried out by the management company.

There are no restrictions on direct investments in securities, nor in terms of duration or allocation between government and corporate issuers.

2.7.3 CURRENCIES

Net exposure to currencies other than the fund's valuation currency, including emerging market currencies, generated through directly held securities or derivatives, is limited to 10% of the net assets.

The fund uses them for exposure or hedging purposes.

2.7.4 DERIVATIVES

In order to achieve its investment objective, the fund may invest in futures traded on Eurozone and international – including emerging – regulated, organised or over-the-counter markets for exposure or hedging purposes.

The derivative instruments liable to be used by the portfolio manager are options, futures, forwards, swaps and CDS (credit default swaps) involving one or more underlying instruments (directly held securities, indices, baskets) in which the portfolio manager may invest.

The fund may use total return swaps (TRS) under the terms of which a counterparty transfers the total financial performance of an underlying asset (including interest and remuneration, capital gains and losses resulting from price fluctuations) to another counterparty. These TRS are used for exposure or hedging purposes and relate to securities (including baskets of securities) such as bonds and eligible bond indices. The expected proportion of assets under management that may be involved in such transactions is 10% of the net assets. However, this exposure may be higher, although it is limited to 20% of the fund's net assets. The fund receives 100% of the net income generated by the TRS, after the deduction of direct and indirect operating costs. The use of TRS presents a counterparty risk, as described in the "Risk profile" section.

These derivatives allow the portfolio manager to expose the fund to the following risks, while respecting the portfolio's overall constraints:

- Fixed income,
- Credit (up to 30% of the net assets - maximum of 10% for exposure),
- Currencies.

2.7.5 STRATEGY FOR USING DERIVATIVES TO ACHIEVE THE INVESTMENT OBJECTIVE

Interest rate derivatives are used to gain long or short exposure, hedge against interest rate risk, or simply adjust the portfolio's modified duration.

Credit derivatives on a single issuer or on credit indices are used to gain long or short exposure to the creditworthiness of an issuer, group of issuers, economic sector, country or region, or to hedge against the risk of default by an issuer, group of issuers, economic sector, country or region, or to adjust the fund's total exposure to credit risk.

Currency derivatives are used to gain long or short exposure, hedge exposure to a currency, or simply adjust the fund's overall exposure to currency risk. They may also be used to pursue relative value strategies, where the fund takes simultaneous long and short positions on foreign exchange markets. The fund also holds forward exchange contracts traded over-the-counter to hedge against currency risk on hedged units denominated in currencies other than the euro.

Derivative transactions may be concluded with counterparties selected by the management company in accordance with its "Best Execution/Best Selection" policy and the approval procedure for new counterparties. The latter are mainly investment banks and international credit institutions, and collateral is required. It should be noted that these counterparties have no discretionary decision-making powers over the composition or management of the fund's portfolio or over the underlying assets of financial derivative instruments.

Investments in derivative markets are limited to 100% of the fund's net assets (cf. section VI. "Overall Risk").

2.7.6 SECURITIES WITH EMBEDDED DERIVATIVES

The fund may invest in securities with embedded derivatives (particularly warrants, puttable/callable bonds, credit-linked notes (CLN), EMTN and subscription certificates following corporate actions resulting in the award of this type of security, etc.) traded on Eurozone, or occasionally international, regulated or over-the-counter markets in order to achieve the investment objective.

These securities with embedded derivatives allow the portfolio manager to expose the fund to the following risks, while respecting the portfolio's overall constraints:

- Fixed income,
- Credit (up to 30% of the net assets - maximum of 10% for exposure),
- Currencies.

The manager may invest up to 8% of the net assets in contingent convertible bonds ("CoCos"). These securities often deliver a higher return (in exchange for higher risk) than conventional bonds due to their specific structure and the place they occupy in the capital structure of the issuer (subordinated debt). They are issued by banks under the oversight of a supervisory authority. They may have bond and equity

features, being hybrid convertible instruments. They may have a safeguard mechanism that turns them into ordinary shares if a trigger event threatens the issuing bank.

The risk associated with this type of investment is limited to the amount invested for the purchase of the securities with embedded derivatives.

2.7.7 STRATEGY FOR USING SECURITIES WITH EMBEDDED DERIVATIVES TO ACHIEVE THE INVESTMENT OBJECTIVE

The portfolio manager uses securities with embedded derivatives, as opposed to the other derivatives mentioned above, to optimise the portfolio's exposure or hedging by reducing the cost of using these financial instruments or gaining exposure to several performance drivers.

The risk associated with this type of investment is limited to the amount invested in its purchase. In all cases, the amounts invested in securities with embedded derivatives, excluding callable/puttable bonds and contingent convertible bonds, may not exceed 10% of the net assets.

The fund may also invest up to 100% of its net assets in callable bonds and puttable bonds. These negotiable debt securities have an optional component allowing for early redemption subject to certain conditions (holding period, occurrence of a specific event, etc.) on the initiative of the issuer (in the case of callable bonds) or at the request of the investor (in the case of puttable bonds).

2.7.8 UCIs AND OTHER INVESTMENT FUNDS, TRACKERS OR EXCHANGE TRADED FUNDS (ETFs)

The fund may invest up to 10% of its net assets in:

- Units or shares of French or foreign UCITS;
- Units or shares of French or European AIFs;
- Foreign investment funds.

Provided that the foreign UCITS, AIF or investment fund meets the criteria of Article R214-13 of the French Monetary and Financial Code.

The fund may invest in funds managed by Carmignac Gestion or an affiliated company.

The fund may use trackers, listed index funds and exchange traded funds.

2.7.9 DEPOSITS AND CASH

The fund may use deposits in order to optimise its cash management and to manage the various subscription or redemption settlement dates of the underlying funds. These trades are made within the limit of 20% of the net assets. This type of transaction will be made on an exceptional basis.

The fund may hold cash on an ancillary basis, in particular in order to meet its redemption obligations in relation to investors. However, the limit on cash holdings may be raised to 20% of the Fund's net assets to protect investors' interests if market conditions so justify.

Cash lending is prohibited.

2.7.10 CASH BORROWINGS

The fund may borrow cash without any intention of being a structural borrower of cash. The fund may find itself temporarily overdrawn due to flow-related trading (investments and divestments pending, subscriptions/redemptions) within the limit of 10% of the fund's net assets.

2.7.11 TEMPORARY PURCHASE AND SALE OF SECURITIES

For efficient portfolio management purposes, and without deviating from its investment objectives, the fund may allocate up to 20% of its net assets to temporary purchases/sales (securities financing transactions) of securities eligible for the fund (essentially equities and money market instruments). These trades are made to optimise the fund's income, invest its cash, adjust the portfolio to changes in the assets under management, or implement the strategies described above. The transactions consist of:

- Securities repurchase and reverse repurchase agreements,
- Securities lending/borrowing.

The expected proportion of assets under management that may be involved in such transactions is 10% of the net assets.

The counterparty to these transactions is CACEIS Bank, Luxembourg Branch. CACEIS Bank, Luxembourg Branch, does not have any power over the composition or management of the fund's portfolio.

Within the scope of these transactions, the fund may receive/give financial guarantees (collateral); the section entitled "Collateral management" contains information on how these work and on their characteristics.

Additional information on fees linked to such transactions appears under the heading "Fees and expenses".

2.8 CONTRACTS AS COLLATERAL

Within the scope of OTC derivatives transactions and temporary purchases/sales of securities, the fund may receive or give financial assets constituting guarantees with the objective of reducing its overall counterparty risk.

The financial guarantees shall primarily take the form of cash in the case of OTC derivatives transactions, and cash and government bonds/Treasury bills in the case of temporary purchases/sales of securities.

All financial guarantees received or given are transferred with full ownership.

The counterparty risk inherent in OTC derivatives transactions, combined with the risk resulting from temporary purchases/sales of securities, may not exceed 10% of the Fund's net assets where the counterparty is one of the credit institutions defined in the current regulations, or 5% of its assets in other cases.

In this regard, any financial guarantee (collateral) received and serving to reduce counterparty risk exposure shall comply with the following:

- It shall take the form of cash or bonds or treasury bills (of any maturity) issued or guaranteed by OECD member states, by their regional public authorities or by supranational institutions and bodies with EU, regional or worldwide scope;
- It shall be held by the Custodian of the fund or by one of its agents or a third party under its supervision or by any third-party custodian subject to prudential supervision and which is not linked in any way to the provider of the financial guarantees;
- In accordance with the regulations in force, they shall at all times fulfil liquidity, valuation (at least daily), issuer credit rating (at least AA-), counterparty correlation (low) and diversification criteria, and exposure to any given issuer shall not exceed 20% of the net assets;
- Financial guarantees received in the form of cash shall be mainly deposited with eligible entities and/or used in reverse repurchase transactions, and to a lesser extent invested in first-rate government bonds or treasury bills and short-term money market funds.

Government bonds or treasury bills received as collateral shall be subject to a discount of between 1% and 10%. The Management Company agrees this contractually with each counterparty.

2.9 RISK PROFILE

The fund invests in financial instruments and, where applicable, funds selected by the management company. The performance of these financial instruments and funds depends on the evolution and fluctuations of the market.

The risk factors described below are not exhaustive. It is up to each investor to analyse the risk associated with such an investment and to form his/her own opinion independent of CARMIGNAC GESTION, where necessary seeking the opinion of any advisers specialised in such matters in order to ensure that this investment is appropriate in relation to his/her financial situation.

a) Risk associated with discretionary management: Discretionary management is based on the expected evolution of the financial markets. The fund's performance will depend on the companies selected and asset allocation chosen by the management company. There is a risk that the management company may not invest in the best performing companies.

b) Interest rate risk: Interest rate risk is the risk that the net asset value may fall in the event of a change in interest rates. When the modified duration of the portfolio is positive, a rise in interest rates may lead to a reduction in the value of the portfolio. When the modified duration of the portfolio is negative, a fall in interest rates may lead to a reduction in the value of the portfolio.

c) Credit risk: Credit risk is the risk that the issuer may default. Should the quality of issuers decline, for example in the event of a downgrade in their rating by the financial rating agencies, the value of private bonds may drop and lead to a fall in the fund's net asset value.

Furthermore, a more specific credit risk linked to the use of credit derivatives, such as credit default swaps, exists. CDS may also involve indices.

Aim of the manager's use of CDS	Loss of value on the CDS position
Sell protection	In the event that the issuer of the underlying security is downgraded
Purchase protection	In the event of the upgrading of the issuer of the underlying security

This credit risk is controlled by a qualitative analysis carried out by the team of credit analysts on the evaluation of companies' solvency.

d) Risk of capital loss: The portfolio is managed on a discretionary basis and does not guarantee or protect the capital invested. A capital loss occurs when a unit is sold at a lower price than that paid at the time of purchase.

e) Emerging markets risk: The operating and supervision conditions of emerging markets may deviate from the standards prevailing on the major international markets, and price variations may be high.

f) Risk associated with high yield bonds: A bond is considered a high yield bond when its credit rating is below investment grade. The value of high yield bonds may fall more substantially and more rapidly than other bonds and negatively affect the net asset value of the fund, which may decrease as a result.

g) Liquidity risk: The markets in which the fund participates may occasionally be subject to temporary illiquidity. These market distortions could have an impact on the pricing conditions under which the fund may have to liquidate, initiate or modify its positions.

h) Currency risk: Currency risk is linked to exposure – through investments and the use of forward financial instruments – to a currency other than the fund's valuation currency. For units denominated in a currency other than the euro, the currency risk linked to fluctuations in the euro versus the valuation currency is residual thanks to systematic hedging. This hedging may generate a performance differential between units in different currencies.

i) Counterparty risk: Counterparty risk measures the potential loss in the event of a counterparty defaulting on over-the-counter financial contracts or failing to meet its contractual obligations on temporary purchases or sales of securities. The fund is exposed to it through over-the-counter financial contracts agreed with various counterparties. In order to reduce the fund's exposure to counterparty risk, the management company may establish financial guarantees in favour of the fund.

j) Risks associated with investment in contingent convertible bonds (CoCos): Risk related to the trigger threshold: these securities have characteristics specific to them. The occurrence of the contingent event may result in a conversion into shares or even a temporary or definitive writing off of all or part of the debt. The level of conversion risk may vary, for example depending on the distance between the issuer's capital ratio and a threshold defined in the issuance prospectus. Risk of loss of coupon: with certain types of CoCo, payment of coupons is discretionary and may be cancelled by the issuer. Risk linked to the complexity of the instrument: as these securities are recent, their performance in periods of stress has not been established beyond doubt. Risk linked to late or non repayment: contingent convertible bonds are perpetual instruments repayable only at predetermined levels with the approval of the relevant authority. Capital structure risk: unlike with the standard capital hierarchy, investors in this type of instrument may suffer a capital loss, which holders of shares in the same issuer would not incur. Liquidity risk: as with the high yield bond market, the liquidity of contingent convertible bonds may be affected significantly in the event of market turmoil.

k) Risk associated with temporary purchases and sales of securities: The use of these transactions and management of their collateral may carry certain specific risks, such as operational risks and custody risk. Use of these transactions may therefore have a negative effect on the fund's net asset value.

l) Legal risk: This is the risk that contracts agreed with counterparties to temporary purchases/sales of securities, or over-the-counter forward financial instruments, may be drafted inappropriately.

m) Risk associated with the reinvestment of collateral: The fund does not intend to reinvest collateral received, but if it does, there would be a risk of the resultant value being lower than the value initially received.

n) Sustainability risk: Refers to an event or an environmental, social or governance factor that, if it were to occur, could have a significant real or potential impact on the value of investments and, ultimately, on the net asset value of the fund.

✓ Incorporation of sustainability risk into investment decisions:

The fund's investments are exposed to sustainability risks, representing a real or potential threat to maximising long-term risk-adjusted rewards. The management company has therefore incorporated the identification and assessment of sustainability risks into its investment decisions and risk management processes, through a three-step procedure:

1) Exclusion: Investments in companies that the management company believes do not meet the fund's sustainability standards are excluded. The Management Company has established an exclusion policy that, amongst other things, provides for corporate exclusions and tolerance thresholds for business in fields such as controversial weapons, tobacco, adult entertainment, thermal coal production and electricity generation. For more information, please consult the exclusion policy in the "Responsible Investment" section of the management company's website: <https://www.carmignac.com>.

2) Analysis: the Management Company incorporates an ESG analysis alongside a traditional financial analysis to identify sustainability risks from issuers in the investment universe, covering more than 90% of corporate bonds and equities. Carmignac's proprietary research system, START, is used by the Management Company to assess sustainability risks. For more information, please refer to the ESG integration policy and the information on the START system available in the "Responsible Investment" section of the management company's website: <https://www.carmignac.com>.

3) Engagement: The Management Company works with issuers on ESG-related matters to raise awareness and gain a better understanding of sustainability risks to portfolios. This engagement may concern a specific environmental, social or governance matter, a long-term impact, controversial behaviour or proxy voting decisions. For more information, please refer to the engagement policy at the address available in the "Responsible Investment" section of the management company's website: <https://www.carmignac.com>.

✓Potential impact of sustainability risk on the fund's returns:

Sustainability risks can have adverse effects on sustainability in terms of a significant real or potential negative impact on the value of investments and net asset value of the fund, and ultimately on investors' return on investment.

There are several ways in which the management company may monitor and assess the financial significance of sustainability risks on a company's financial returns:

- **Environmental:** The management company believes that if a company does not take into account the environmental impact of its business and the production of its goods and services, then it may lose natural capital, incur environmental fines, or suffer lower demand for its goods and services. Where relevant, a company's carbon footprint, water and waste management, and supply chain, are therefore all monitored.
- **Social:** The management company believes that social indicators are important in monitoring a company's long-term growth potential and financial stability. These policies on human capital, product safety checks and client data protection are just some of the important practices that are monitored.
- **Governance:** The management company believes that poor corporate governance may present a financial risk. The independence of the board of directors, composition and skills of the executive committee, treatment of minority shareholders, and remuneration, are the key factors studied. Companies' approach to accounting, tax and anti-corruption practices is also checked.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

2.10 TARGET SUBSCRIBERS AND INVESTOR PROFILE

Units of this fund have not been registered in accordance with the US Securities Act of 1933. They may therefore not be offered or sold, either directly or indirectly on behalf of or for the benefit of a US person, as defined in Regulation S. Furthermore, units of this fund may not be offered or sold, either directly or indirectly, to US persons and/or to any entities held by one or more US persons as defined by the US Foreign Account Tax Compliance Act (FATCA).

Aside from this exception, the fund is open to all investors.

Investors include institutions (such as associations, pension funds, paid leave funds and all non-profit organisations), legal entities and natural persons seeking a low-risk investment profile. The fund's investment policy meets the needs of certain company treasurers, institutions subject to tax and high net worth individuals.

The appropriate amount to invest in this fund depends on the personal situation of the investor. To determine this amount, the investor's assets, current and future financial requirements and degree of risk aversion must all be taken into account. It is also recommended that investments be sufficiently diversified so as to avoid exposure exclusively to the risks of this fund.

3. INVESTMENT POLICY

3.1 FUND COMMENTARY

Recommended minimum investment horizon: 

Carmignac Sécurité returned +5.28% (A EUR Acc units – FR0010149120) in 2024, beating its reference indicator (ICE BofA ML 1-3 Y Euro All Government Index (EUR)), which rose by +3.16%.

2024 was therefore a positive year for the fund, with historically low year-on-year volatility of 1.1% as at the end of December (calculated on a weekly basis). Sustained by historically high interest rates, carry was one of the main contributors to performance. All the fund’s major strategies nevertheless made their contribution. Active duration management, the tightening of credit margins in preferred segments (financials, energy, etc.), strategies benefiting from persistent inflation and the steepening of curves – all contributed positively to the fund’s performance.

In the US, the Federal Reserve (Fed) took a proactive approach to the deteriorating labour market in 2024 by starting its rate-cutting cycle with a 50 basis point cut in September. This decision was aimed at ensuring a soft landing for the economy, in response to signs of an economic slowdown. Monetary easing had been well anticipated by the markets (10-year yields performed particularly well in the third quarter), and fears that easing came too early once again pushed up long-term yields. The US 10-year yield ended the year at 4.57%, compared with 3.77% at the end of September and 3.86% at the end of 2023. The 2-10 year yield curve continued to steepen after a lacklustre first half. This rise in rates over the year reflects the fact that, while the Federal Open Market Committee (FOMC) is firmly embarked on its move to cut rates, the performance of the real economy has been surprisingly strong. The election of Donald Trump bolstered this optimism, as his programme seemed very focused on supporting the US economy (via tax cuts, deregulation and import tariffs).

In Europe, the ECB maintained an accommodative monetary policy by cutting rates by 100 basis points over the course of the year. Quantitative tightening (QT) continued to reduce excess liquidity, putting pressure on bond yields. At the same time, governments endeavoured to reduce their budget deficits and net issuance reached record levels.

The German 10-year yield ended the year at 2.36%, compared with 2.12% at the end of September and 2.07% at the end of 2023. Sovereign spreads in the Eurozone experienced mixed fortunes, with the Italian spread narrowing by almost 50 bps over the year. In France, meanwhile, the dissolution of parliament and difficulties in building a stable government cost the French 10-year yield 30 bps more than its German counterpart, with the spread reaching 80 bps by the end of the year.

Central bank rate cuts, strong equity markets (particularly in the US) and stimulus measures in China created a favourable environment for risk assets. Subscription flows into credit funds enabled the corporate bond market to perform well throughout the year, with the average spread on the European investment-grade credit market versus Germany decreasing from 140 bps early in the year to around 100 bps at the end of 2024. It should be noted that these very low levels by historical standards were achieved at a time when economic growth in Europe was hovering around zero. As a result, flows largely dominated fundamentals this year.

In the closing quarter, modified duration – which reflects the portfolio’s sensitivity to interest rates – was reduced to around 1.40 at the end of November (compared with almost 2 at the end of September) before being raised slightly to 1.53 at the end of December through purchases of short-term US debt. Over the course of the year, the modified duration of corporate bonds remained stable at around 1.35/1.40, while

that of government bonds fluctuated in line with market valuations to peak at end-June. Modified duration was then gradually brought down as interest rates fell, slightly reducing growth across the board. At the very end of the year the fund once again took exposure to 2-year US bonds, at the time when markets were expecting only two rate cuts by the Fed in 2025 – which to us seemed like the minimum.

3.2 TABLE SHOWING THE ANNUAL PERFORMANCE OF THE DIFFERENT CARMIGNAC SECURITE UNITS OVER 2024

3.5 TRANSPARENCY OF SECURITIES FINANCING TRANSACTIONS AND THE REUSE OF FINANCIAL INSTRUMENTS PURSUANT TO THE SFTR IN THE FUND'S CURRENCY OF ACCOUNT (EUR)

The fund took no part in any trades covered by the SFTR during the year.

4. REGULATORY INFORMATION

4.1 POLICY FOR THE SELECTION OF INTERMEDIARIES

"In its capacity as management company, Carmignac Gestion selects service providers whose execution policy guarantees the best possible result when executing orders transmitted on behalf of its UCIs or its clients. It also selects service providers to aid in making investment decisions and to execute orders. In both cases, Carmignac Gestion has defined a policy for selecting and evaluating intermediaries according to certain criteria. You can find the updated version of this policy at www.carmignac.com". You will also find a report on intermediary fees on this website.

4.2 NON-FINANCIAL CHARACTERISTICS

As of 31 December 2024, the financial product was classified under Article 8 of the EU SFDR. The required regulatory information is included in the appendix to this report.

4.3 OVERALL RISK CALCULATION METHOD

The fund's overall risk is calculated using the commitment method.

4.4 REMUNERATION POLICY

Carmignac Gestion SA's remuneration policy is designed to comply with European and national remuneration and governance rules as set out in the UCITS Directive 2009/65/EC of the European Parliament and of the Council of 13 July 2009 and 2014/91/EU of 23 July 2014, the ESMA guideline of 14 October 2016 (ESMA/2016/575), and the AIFM Directive 2011/61/EU of the European Parliament and of the Council.

It promotes sound and effective risk management without excessive risk taking. In particular, it ties employees to the risks they take to ensure that Identified Staff are fully committed to the Company's long-term performance.

The remuneration policy was approved by the Board of Directors of the management company. The principles of this policy are re-evaluated at least once a year by the remuneration and nominations committee and Board of Directors, and are adjusted to fit the changing regulatory framework. Details of the remuneration policy, including a description of how remuneration and benefits are calculated, as well as information on the remuneration and nominations committee, can be found at www.carmignac.com. A printout of the remuneration policy is available free of charge upon request.

4.4.1 VARIABLE PART: DETERMINATION AND APPRAISAL

Variable remuneration depends on both the individual success of the employee and the performance of the Company as a whole.

The variable remuneration budget is determined on the basis of Carmignac Gestion SA's results over the previous financial year, while ensuring that capital remains at a sufficient level. It is then distributed between the various departments according to the assessment of their performance, and within each department according to employees' individual performance appraisals.

The amount of the variable portion allocated to each employee reflects their performance and the achievement of targets set by the Company.

These targets may be quantitative and/or qualitative and are linked to the employee's position. They take into account individual behaviour to avoid short-term risk taking. They give particular consideration to the sustainability of action taken by the employee and its long-term benefits for the company, the employee's personal involvement and the completion of assigned tasks.

4.4.2 2023 FINANCIAL YEAR

The implementation of the remuneration policy for 2022 has been assessed internally and independently to check compliance with the remuneration policies and procedures adopted by Carmignac Gestion's Board of Directors.

4.4.3 2024 FINANCIAL YEAR

The annual report produced by Carmignac Gestion's Board of Directors is available on the Carmignac website (www.carmignac.com).

2024	
Number of employees	170
Fixed salaries paid in 2024	14,814,665.53 €
Total variable remuneration paid in 2024	38,348,894.36 €
Total remuneration paid in 2024	53,163,559.89 €
> of which risk takers	39,937,571.06 €
> of which non-risk takers	13,225,988.83 €

4.5 SUBSTANTIAL CHANGES DURING THE YEAR

On 27 September 2024, a number of changes were made to the portfolio's SFDR annex. These changes were:

- The climate target, specifying that the fund is aiming for a gradual reduction in emissions from its portfolio of 50% in 2030, 70% in 2040 and to achieve net zero by 2050.
- Selectivity within an initial investment universe was reduced by 25%.
- More precise details of the composition of the initial investment universe:
 - o "ICE BofA Global Corporate, ICE BofA Global High Yield, and ICE BofA Emerging Market Corporate Plus"
- Adjustment of START (Carmignac's proprietary ESG rating tool) rating ranges to reduce the investment universe:
- The addition of an ESG analysis framework specific to derivatives.

NOTES TO THE FINANCIAL STATEMENTS OF CARMIGNAC SECURITE

A. GENERAL INFORMATION

A1. CHARACTERISTICS AND ACTIVITY OF THE UCITS WITH VARIABLE CAPITAL

A1a. INVESTMENT STRATEGY AND PROFILE

The fund's objective is to outperform its reference indicator over a recommended investment horizon of two years.

The fund seeks to invest sustainably and applies a socially responsible investment approach. The ways in which the socially responsible investment approach is followed are described in the "Environmental and/or social characteristics" annex below, and can be found on www.carmignac.com.

These characteristics are fully and accurately described in the fund's prospectus and management regulations.

A1b. CHARACTERISTICS OF THE FUND OVER THE LAST FIVE FINANCIAL YEARS

A2. ACCOUNTING METHODS AND RULES

The annual financial statements have been drawn up for the first time in the form required by ANC Regulation 2020-07, as amended by ANC Regulation 2022-03.

1 Changes in accounting methods, including presentation, in connection with the application of the new accounting regulation on the annual financial statements of undertakings for collective investment with variable capital (amended ANC regulation 2020-07).

This new regulation requires changes in accounting methods, including changes in the presentation of the annual financial statements. It is therefore not possible to compare them with the previous year's accounts.

NB: The statements in question are (in addition to the balance sheet and income statement): B1. Changes in equity and financing liabilities; D5a. Allocation of distributable amounts relating to net income; and D5b. Allocation of distributable amounts relating to net realised capital gains and losses.

Therefore, in accordance with Article 3, paragraph 2 of ANC Regulation 2020-07, the financial statements do not present data for the previous financial year; the N-1 financial statements are included in the notes to the financial statements.

These changes mainly relate to:

- the structure of the balance sheet, which is now presented by type of eligible asset and liability, including loans and borrowings;
- the structure of the income statement, which has been changed significantly; in particular, the income statement includes: exchange differences on financial accounts, unrealised capital gains or losses, realised capital gains and losses and transaction costs;
- the elimination of the off-balance sheet table (some of the information on the items in this table is now included in the notes to the financial statements);
- the elimination of the option to account for expenses included in the cost price (without retroactive effect for funds previously applying the inclusive of costs method);
- the distinction between convertible bonds and other bonds, and their respective accounting records;
- a new classification of target funds held in the portfolio according to the model: UCITS / FIAs / Other;
- accounting for forward foreign exchange commitments, which is no longer done at balance sheet level but at off-balance sheet level, with information on forward foreign exchange covering a specific portion;
- the addition of information on direct and indirect exposure to different markets;
- the presentation of the inventory, which now distinguishes between eligible assets and liabilities and forward financial instruments;
- the adoption of a single presentation model for all types of UCI;
- the elimination of the aggregation of accounts for umbrella funds.

2 Accounting rules and methods applied during the year

General accounting principles apply (subject to the changes described above):

- a true and fair view, comparability, going concern,
- lawfulness and fairness,
- prudence,
- consistent practice from one financial year to the next.

Income from fixed income securities is recorded on the basis of accrued interest.

Purchases and sales of securities are recorded exclusive of costs.

The accounting currency of the portfolio is the euro.

There are 12 months in the financial year.

Asset valuation rules

Financial instruments are recorded in the financial statements using the historical cost method and are entered on the balance sheet at their current value as determined by the last-known market value or, where a market does not exist, by any external means or by using financial models.

Differences between the current values used to calculate the net asset value and the historical costs of transferable securities when first included in the portfolio are recorded in "valuation differentials" accounts.

Securities that are not denominated in the currency of the portfolio are valued in accordance with the principle described below; the valuation is then converted into the currency of the portfolio on the basis of the exchange rate prevailing on the valuation day.

Deposits:

Deposits with a residual maturity of less than or equal to three months are valued using the straight-line method.

Equities, bonds and other securities traded on a regulated or similar market:

For the calculation of the net asset value, equities and other securities traded on a regulated or similar market are valued on the basis of the last market price of the day.

Bonds and other similar securities are valued at the closing price supplied by various financial service providers. Interest accrued on bonds and other similar securities is calculated up to the date of the net asset value.

Equities, bonds and other securities not traded on a regulated or similar market:

Securities not traded on a regulated market are valued by the management company using methods based on the market value and the yield, while taking account of recent prices observed for significant transactions.

Transferable debt securities:

Transferable debt securities and similar securities that are not traded in large volumes are valued on the basis of an actuarial method, the reference rate (as defined below) being increased, where applicable, by a differential representative of the intrinsic characteristics of the issuer:

- Transferable debt securities with a maturity of less than or equal to one year: Interbank rate in euro (Euribor);
- Transferable debt securities with a maturity exceeding one year: valued using rates for French Treasury bills (BTAN and OAT) with similar maturity dates for the longer durations.

Transferable debt securities with a residual maturity of less than three months may be valued using the straight-line method.

French treasury bills are valued on the basis of market prices, as published daily by the Bank of France or by treasury bill specialists.

UCIs held by the fund:

Units or shares of UCIs will be valued at their last-known net asset value.

Temporary transactions on securities:

Securities received under repurchase agreements are recorded as an asset under the heading "Receivables on securities received under a repurchase agreement (*pension*)" at the contract amount, plus any accrued interest receivable.

Securities transferred under a repurchase agreement are recorded as securities purchased at their current value. The payables on securities transferred under a repurchase agreement are recorded as securities sold at the value determined in the contract, plus any accrued interest payable.

Securities lent are valued at their current value and are recorded as an asset under the heading "Receivables on securities lent" at their current value, plus any accrued interest receivable.

Securities borrowed are recorded as an asset under the heading "Securities borrowed" at the contract amount and as a liability under the heading "Payables on securities borrowed" at the contract amount, plus any accrued interest payable.

Forward financial instruments:

Forward financial instruments traded on a regulated or similar market:

Forward financial instruments traded on regulated markets are valued at the settlement price of that day.

Forward financial instruments not traded on a regulated or similar market:

CDS:

CDS are valued on the basis of mathematical models using credit spread curves fed into financial databases.

Swaps:

Interest rate and/or currency swaps are valued at their market value by discounting future interest payments at the interest rate and/or currency exchange rate prevailing on the market. This price is adjusted to reflect issuer risk.

Index swaps are valued using an actuarial method on the basis of a reference rate provided by the counterparty.

Other swaps are valued at their market value or at a value estimated according to the terms and conditions determined by the management company.

The inflation swaps in the portfolio are valued on the basis of prices calculated by the counterparty and validated by the management company using mathematical financial models.

Direct exposure to credit markets: principles and rules used for the breakdown of the components of the fund portfolio (table C1f.):

All components of the fund portfolio with direct exposure to credit markets are included in this table.

For each item, the various ratings are retrieved: issue and/or issuer rating, long-term and/or short-term rating.

These ratings are obtained from two rating agencies.

The rules for determining the ratings are as follows:

1st level: If there is a rating for the issue, this is used rather than the issuer's rating. For short-term debt (particularly sovereign debt), the issuer's short-term rating is used if no issue rating is available

2nd level: The highest rating is chosen from those available from the two rating agencies. If the difference between the available ratings is considered to be significant or if the item is identified as being subject to an event that has a significant impact on its credit quality, the possibility of using an internal rating is examined.

If no rating is available, an internal rating is systematically assigned to the item.

The internal rating methodology is based on a fundamental analysis of the issuer, taking into account the specific features of the issue.

Lastly, depending on the rating used, the item is categorised according to market standards defining the concepts of "Investment Grade" and "Non-Investment Grade".

Management fees

Management fees and operating costs cover all the charges relating to the fund: investment, administrative, accounting, custody, distribution, audit fees, etc.

These fees are recorded in the fund's income statement.

Management fees do not include transaction fees. Please refer to the prospectus for further details on the charges actually invoiced to the fund.

They are recorded on a pro-rata basis each time the net asset value is calculated.

The combined total of these fees respects the limit of the net assets, as specified in the prospectus or fund rules:

FR0011269083 - A EUR Ydis units: Maximum of 1.00% inclusive of tax.

FR0011269109 - AW USD Acc Hdg units: Maximum of 1.00% inclusive of tax.

FR0010149120 - AW EUR Acc units: Maximum of 1.00% inclusive of tax.

FR001400TVF4 - Z EUR Acc units: Maximum of 0.00% inclusive of tax.

A provision for research costs is set aside on each net asset value date based on an annual budget of EUR 198,838.23.

Operating and other service expenses are 0.11% of net assets.

Allocation of distributable income

Definition of distributable income:

Distributable income is made up of:

Income:

Net income increased by retained earnings, plus or minus the balance of the income equalisation accounts.

Capital gains and losses:

Realised capital gains, net of fees, minus realised capital losses, net of fees, recognised during the financial year, plus net capital gains of a similar nature recognised during previous financial years and which have not been distributed or accumulated, plus or minus the balance of the capital gains equalisation account.

The amounts referred to as “income” and “capital gains and losses” may be distributed, in full or in part, independently of each other.

Payment of distributable income is made within five months of the financial year-end.

Where the fund is authorised under Regulation (EU) No 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds, by way of derogation from the provisions of I, the distributable amounts may also include unrealised capital gains.

Allocation of distributable income:

Unit(s)	Distribution of net income	Allocation of net realised capital gains or losses
AW EUR Acc units	Accumulation	Accumulation
AW EUR Ydis units	Distributed and/or carried forward on the decision of the management company	Distributed and/or carried forward on the decision of the management company

NOTES TO THE FINANCIAL STATEMENTS

1. Accounting methods and rules

The annual financial statements are drawn up in the form required by ANC Regulation 2014-01, as amended.

The general principles of accounting apply:

- a true and fair view, comparability, going concern,
- lawfulness and fairness,
- prudence,
- consistency of methods from one financial year to the next.

Income from fixed income securities is recorded on the basis of accrued interest.

Purchases and sales of securities are recorded exclusive of costs.

The accounting currency of the portfolio is the euro.

There are 12 months in the financial year.

Asset valuation rules

Financial instruments are recorded in the financial statements using the historical cost method and they are entered on the balance sheet at their current value as determined by the last known market value or, where a market does not exist, by any external means or by using financial models.

Differences between the current values used to calculate the net asset value and the historical costs of transferable securities when first included in the portfolio are recorded in "valuation differentials" accounts.

Securities that are not denominated in the currency of the portfolio are valued in accordance with the principle described below; the valuation is then converted into the currency of the portfolio on the basis of the exchange rate prevailing on the valuation day.

Deposits:

Deposits with a residual maturity of less than or equal to three months are valued using the straight-line method.

Equities, bonds and other securities traded on a regulated or similar market:

For the calculation of the net asset value, equities and other securities traded on a regulated or similar market are valued on the basis of the last market price of the day.

Bonds and other similar securities are valued at the closing price supplied by various financial service providers. Interest accrued on bonds and other similar securities is calculated up to the date of the net asset value.

The crisis related to the conflict between Russia and Ukraine creates special conditions for the valuation of financial instruments exposed to these countries. As such, the management company has had to introduce a specific valuation policy for these instruments in order to take into account:

- the closure of financial markets in some countries,
- uncertainty about future debt collection in these states,
- uncertainty about future debt collection from companies headquartered in these countries, or whose business is significantly exposed to or dependent on these countries.
- the exceptional measures taken in the context of the sanctions against Russia,

Given the nature of the securities in the portfolio of the CARMIGNAC SECURITE fund, the management company has decided to continue to value the bonds concerned using a method based on contributions (contributions from financial service providers shown in Bloomberg). The management company regularly reviews whether or not it is still appropriate to use this method. These securities represent 0.50% of the fund's net assets as of 29 December 2023.

Valuations ascertained in this way are subject to uncertainty and cannot be as accurate as those derived from quotations on regulated markets. As a result, there could be a significant difference between the values recorded, ascertained as indicated above, and the prices that would actually be obtained if a portion of these portfolio assets were to be disposed of in the near future. The value of these securities may also depend on possible future recoveries.

Equities, bonds and other securities not traded on a regulated or similar market:

Securities not traded on a regulated market are valued by the management company using methods based on the market value and the yield, while taking account of recent prices observed for significant transactions.

Transferable debt securities:

Transferable debt securities and similar securities that are not traded in large volumes are valued on the basis of an actuarial method, the reference rate (as defined below) being increased, where applicable, by a differential representative of the intrinsic characteristics of the issuer:

- Transferable debt securities with a maturity of less than or equal to 1 year: Interbank rate in euro (Euribor);
- Transferable debt securities with a maturity exceeding 1 year: Valued using rates for French treasury bills (BTAN and OAT) with similar maturity dates for the longer durations.

Transferable debt securities with a residual maturity of less than three months may be valued using the straight-line method.

French treasury bills are valued on the basis of market prices, as published daily by the Bank of France or by treasury bill specialists.

UCIs held by the fund:

Units or shares of UCIs shall be valued at their last known net asset value.

Temporary transactions on securities:

Securities received under repurchase agreements are recorded as an asset under the heading "Receivables on securities received under a repurchase agreement (*pension*)" at the contract amount, plus any accrued interest receivable.

Securities transferred under a repurchase agreement are recorded as securities purchased at their current value. The payables on securities transferred under a repurchase agreement are recorded as securities sold at the value determined in the contract, plus any accrued interest payable.

Securities lent are valued at their current value and are recorded as an asset under the heading "Receivables on securities lent" at their current value, plus any accrued interest receivable.

Securities borrowed are recorded as an asset under the heading "Securities borrowed" at the contract amount and as a liability under the heading "Payables on securities borrowed" at the contract amount, plus any accrued interest payable.

Forward financial instruments:

Forward financial instruments traded on a regulated or similar market:

Forward financial instruments traded on regulated markets are valued at the settlement price of that day.

Forward financial instruments not traded on a regulated or similar market:

CDS:

CDS are valued on the basis of mathematical models using credit spread curves fed into financial databases.

Swaps:

Interest rate and/or currency swaps are valued at their market value by discounting future interest payments at the interest rate and/or currency exchange rate prevailing on the market. This price is adjusted to reflect issuer risk.

Index swaps are valued using an actuarial method on the basis of a reference rate provided by the counterparty.

Other swaps are valued at their market value or at a value estimated according to the terms and conditions determined by the management company.

The inflation swaps in the portfolio are valued on the basis of prices calculated by the counterparty and validated by the management company using mathematical financial models.

Off-balance sheet commitments:

Futures contracts are recorded at their market value as off-balance sheet commitments on the basis of the price used in the portfolio.

Options are converted into the underlying equivalent.

Swap commitments are recorded at their nominal value or, where there is no nominal value, at an equivalent amount.

Management fees

Management fees and operating costs cover all the charges relating to the fund: investment, administrative, accounting, custody, distribution, audit fees, etc.

These fees are recorded in the UCI's income statement.

Management fees do not include transaction fees. Please refer to the prospectus for further details on the charges actually invoiced to the fund.

They are recorded on a pro-rata basis each time the net asset value is calculated.

The combined total of these fees respects the limit of the net assets, as specified in the prospectus or fund rules:

FR0011269083 - A EUR Ydis units: Maximum of 1.00% inclusive of tax.

FR0011269109 – AW USD Acc Hdg units: Maximum of 1.00% inclusive of tax.

FR0010149120 – AW EUR Acc units: Maximum of 1.00% inclusive of tax.

A provision for research costs is set aside on each net asset value date based on an annual budget of EUR 297,500.

Allocation of distributable income

Definition of distributable income

Distributable income is made up of:

Income:

The net income is increased by retained earnings, plus or minus the income equalisation balance.

The net income for the financial year is equal to the amount of interest, arrears, dividends, premiums and prizes, remuneration as well as all proceeds generated by the securities held in the UCI's portfolio, plus income generated by temporary cash holdings, less management fees and borrowing costs.

Capital gains and losses:

Realised capital gains, net of fees, minus realised capital losses, net of fees, recognised during the financial year, plus net capital gains of a similar nature recognised during previous financial years and which have not been distributed or accumulated, plus or minus the balance of the capital gains equalisation account.

Allocation of distributable income:

Unit(s)	Allocation of net income	Allocation of net realised capital gains or losses
AW EUR Acc units	Accumulation	Accumulation
AW EUR Ydis units	Distributed and/or carried forward on the decision of the management company	Distributed and/or carried forward on the decision of the management company
AW USD Acc Hdg units	Accumulation	Accumulation

ANNEX IV

Periodic disclosure template for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CARMIGNAC SECURITÉ
Legal entity identifier: 969500EBHL0T9UB25E97

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**
: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 31.9% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund applies a “best-in-universe” approach (identifying companies whose activities are sustainable) and a “best-efforts” approach (consisting in favouring issuers that exhibit an improvement or strong prospects in terms of ESG practices and performance over time) in order to invest sustainably by combining these strategies: 1) ESG integration, 2) negative screening, 3) positive screening, 4) active stewardship to promote environmental and social characteristics, and 5) monitoring of principal adverse impacts – PAIs).

No failures to achieve the environmental and social characteristics promoted were identified during the year.

● *How did the sustainability indicators perform?*

This fund uses sustainability indicators derived from its four-pillar approach to measure the attainment of each of the environmental or social characteristics it promotes:

1) Coverage rate of ESG analysis: ESG integration, through ESG rating via Carmignac's proprietary "START" (System for Tracking and Analysis of a Responsible Trajectory) platform, is applied to at least 90% of securities. In 2024, the ESG analysis coverage rate was 96.7% of the securities in the portfolio (excluding cash and derivatives), on average, based on quarter-end data.

2) Reduction of the investment universe: The fund's investment universe is made up of the ICE BofAML Global Corporate index, the ICE BofA Global High Yield index and the ICE BofA Emerging Markets Corporate Plus index. This represents around 2,500 issuers (excluding sovereign and quasi-sovereign issuers). This investment universe is reduced by a minimum of 20% by applying the exclusions set out below.

a. **Exclusions at management company level:** Unsustainable activities and practices are identified using an approach based on international standards and rules in the following areas: (a) controversies concerning the OECD Guidelines, the International Labour Organization (ILO) Declaration on Fundamental Principles and Rights at Work, and the principles of the United Nations Global Compact, (b) controversial weapons, (c) thermal coal production, (d) energy producers, (e) tobacco, (f) adult entertainment.

b. **Negative screening specific to the fund:** Bond portfolio positions with a global START score of "D" or "E" (on a rating scale from "E" to "A") are excluded from the fund's investment universe. Issuers with a START score of "E" (on a rating scale from "E" to "A") on environmental or social pillars are excluded from the fund's investment universe. Issuers with a global MSCI rating of "CCC" or "B" (on a scale from "C" to "AAA") are excluded from the fund's investment universe. Issuers with a global MSCI rating of "CCC" or "B" (rating of "E" to "A") may re-enter the fund's investment universe if they have a START rating of "C" or higher.

Before the investment universe is reduced as described above, the equity and corporate bond universes are reweighted to eliminate any biases that could result in significant differences between the composition of the indices constituting these universes and that of the fund's portfolio. Each issuer is reweighted using the fund's historical weightings by sector, geographical region (emerging markets/developed markets) and capitalisation (small/mid/large), with authorised deviation of +/-5% for each of these characteristics. The weightings used are calculated annually whereas the universe components and the ESG data used to reduce the universe are updated quarterly. The reweighting is carried out using the fund's average historical weightings, observed over the past two years (corresponding to the recommended investment horizon).

In 2024, the portfolio's investment universe was reduced by 20.7%, on average, based on end-of-quarter data.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

3) Positive screening (sustainable investment): At least 10% of the fund's net assets are invested in (i) green bonds, social or sustainable bonds issued by public or corporate issuers, and bonds linked to sustainable development ("sustainability-linked bonds"), or (ii) bonds issued by companies considered as being aligned with the United Nations Sustainable Development Goals (as listed below). The minimum levels of sustainable investments with environmental and social objectives are 1% and 3% of the fund's net assets, respectively.

An investment/issuer is aligned when at least one of the following three thresholds is reached:

- a. **Goods and services:** At least 50% of their revenue derives from goods or services linked to at least one of the following nine United Nations Sustainable Development Goals, out of 17: (1) No poverty, (2) Zero hunger, (3) Good health and well-being, (4) Quality education, (6) Clean water and sanitation, (7) Affordable and clean energy, (9) Industry, innovation and infrastructure, (11) Sustainable cities and communities and (12) Responsible consumption and production; or
- b. **Capital expenditure (CapEx):** At least 30% of capital expenditure is on business activities related to at least one of the following nine United Nations Sustainable Development Goals, out of 17: (1) No poverty, (2) Zero hunger, (3) Good health and well-being, (4) Quality education, (6) Clean water and sanitation, (7) Affordable and clean energy, (9) Industry, innovation and infrastructure, (11) Sustainable cities and communities and (12) Responsible consumption and production; or
- c. **Operations:**
 - i. The issuer is given "aligned" status, in terms of operational alignment, for at least three of the 17 United Nations Sustainable Development Goals, determined on the basis of evidence provided by the issuer regarding its policies, practices and objectives in line with these Sustainable Development Goals. "Aligned" status corresponds to an operational alignment score higher than or equal to +2 (on a scale from -10 to +10), as determined by the external rating provider selected by the management company; and
 - ii. The issuer has not been given "non-aligned" status, for operational alignment, with any of the 17 United Nations Sustainable Development Goals. "Non-aligned" status corresponds to an operational alignment score of below or equal to -2 (on a scale from -10 to +10), as determined by the external rating provider selected by the management company.

In 2024, 31.9% of the fund's net assets were invested in sustainable investments, on average, based on quarter-end data. The sustainable investment levels with environmental and social objectives are 15.3% and 16.6% of the fund's net assets respectively, on average, based on quarter-end data. The proportion of green, social or sustainable bonds issued by public or corporate issuers, and bonds linked to sustainable development ("sustainability-linked bonds") in 2024 was 9.3%, on average, based on quarter-end data.

4) Active stewardship for bondholders: Companies' environmental and social engagement efforts leading to an improvement in companies' sustainable development policies are measured using the following indicators: (a) level of active engagement and voting policies, (b) number of engagement efforts, and (c) participation in shareholder (or bondholder) meetings. In 2024, Carmignac as a whole conducted 70 engagement efforts with 54 companies and 1 sovereign entity, and the Carmignac Sécurité fund engaged with 11 companies, including an engagement with Accor.

5) Principal adverse impacts – PAIs: Moreover, as regards monitoring principal adverse impacts ("PAIs"), and in accordance with Annex 1 to Commission Delegated Regulation (EU) 2022/1288, the fund monitors 16 mandatory environmental and social indicators, and 2 optional indicators to demonstrate the impact of sustainable investments with respect to these indicators: greenhouse gas (GHG) emissions, carbon footprint, GHG intensity of investee companies, exposure to companies active in the fossil fuel sector, share of non-renewable energy consumption and production, energy consumption intensity per high impact climate sector, activities negatively affecting biodiversity-sensitive areas, emissions to water, hazardous waste and radioactive waste ratio, water usage and recycling (optional choice), violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises, lack of processes and compliance mechanisms to monitor compliance with UN Global Compact and OECD Guidelines for Multinational Enterprises, unadjusted gender pay gap, board gender diversity, exposure to controversial weapons, excessive pay ratio (optional choice). Where appropriate, sovereign issuers are monitored for violations of social norms and their GHG intensity.

Please find below performance data with respect to principal adverse impact indicators for 2024, based on average quarter-end data, for the portfolio's corporate bond components:

PAI Indicators	Based on data provided by the company	Fund	Hedging
Scope 1 GHG	Scope 1 GHG emissions	216,117.16	82.04%
Scope 2 GHG	Scope 2 GHG emissions	22,176.72	82.04%
Scope 3 GHG	From 1 January 2023, Scope 3 GHG emissions	2,286,470.67	82.16%
Total GHG	Total GHG emissions	2,538,982.45	81.89%
Carbon footprint	Carbon footprint	1,112.42	81.89%
GHG intensity level	GHG intensity of companies	1,210.75	89.83%
Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	22%	89.83%
Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and production of investee companies from non-renewable energy sources compared with renewable energy sources, expressed as a percentage	66%	76.16%
Energy consumption intensity per high impact climate sector – Total	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – Total	0.54	78.26%
Energy consumption intensity per high impact climate sector – NACE Sector A	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector A (Agriculture, forestry and fishing)	-	78.26%
Energy consumption intensity per high impact climate sector – NACE Sector B	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector B (Mining and quarrying)	1.71	78.26%
Energy consumption intensity per high impact climate sector – NACE Sector C	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector C (Manufacturing)	0.64	78.26%

Energy consumption intensity per high impact climate sector – NACE Sector D	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector D (Electricity, gas, steam and air conditioning supply)	1.82	78.26%
Energy consumption intensity per high impact climate sector – NACE Sector E	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector E (water supply, sewerage, waste management and remediation activities)	2.39	78.26%
Energy consumption intensity per high impact climate sector – NACE Sector F	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector F (Construction)	0.08	78.26%
Energy consumption intensity per high impact climate sector – NACE Sector G	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector G (Wholesale and retail trade; repair of motor vehicles and motorcycles)	0.15	78.26%
Energy consumption intensity per high impact climate sector – NACE Sector H	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector H (Transportation and storage)	1.10	78.26%
Energy consumption intensity per high impact climate sector – NACE Sector L	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector L (Real estate activities)	1.18	78.26%
Biodiversity	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	10%	83.44%
Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.01	1.06%
Hazardous waste	Tonnes of hazardous waste generated by investee companies per million EUR invested, expressed as a weighted average	1.52	71.39%
Water usage and recycling	Average amount of water consumed and recovered by the investee companies (in cubic metres) per million EUR of revenue	0.00	1.78%
Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	-	91.66%
Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00	80.92%
Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	13%	65.06%
Board gender diversity	Average ratio of female to male board members in investee companies	38%	86.43%
Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	-	87.73%
Excessive CEO pay ratio	Average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest-compensated individual).	98.58	62.89%
Greenhouse gas intensity (sovereign and supranational)	GHG intensity of investee countries (tonnes of CO ₂ e emissions per million EUR of the country's GDP)	273.74	79.31%
Social violations (sovereign and supranational)	Number of investee countries subject to social violations (as an absolute number and in proportion to the total number of countries receiving investments), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0.50	79.31%

● ...and compared to previous periods?

This fund uses sustainability indicators derived from its four-pillar approach to measure the attainment of each of the environmental or social characteristics it promotes:

- 1) **Coverage rate of ESG analysis:** ESG integration, through ESG rating via Carmignac's proprietary "START" (System for Tracking and Analysis of a Responsible Trajectory) platform, is applied to at least 90% of securities. In 2023, the ESG analysis coverage rate was 97.3% of the securities in the portfolio (excluding cash and derivatives), on average, based on quarter-end data.
- 2) **Reduction of the investment universe:**
 - a. **Exclusions at management company level:** Unsustainable activities and practices are identified using an approach based on international standards and rules in the following areas: (a) controversies concerning the OECD Guidelines, the International Labour Organization (ILO) Declaration on Fundamental Principles and Rights at Work, and the principles of the United Nations Global Compact, (b) controversial weapons, (c) thermal coal production, (d) energy producers, (e) tobacco, (f) adult entertainment.
 - b. **Negative screening specific to the fund:** Bond portfolio positions with an MSCI rating for the environmental or social pillars of below 2.5 (on a scale from 0 to 10), or with an overall MSCI rating of CCC (on a scale from AAA to CCC), are excluded from the fund's investment universe. Companies with a START score of C or above (on a rating scale of A to E) may re-enter the fund once the portfolio manager has carried out ad-hoc analysis (which may entail engagement with the issuer). The table below details the correspondences between the MSCI and START ratings used by the fund for negative screening.

In 2023, the portfolio's investment universe was reduced by 20.1%, on average, based on quarter-end data.

- 3) **Positive screening (sustainable investment):** At least 10% of the fund's net assets are invested in (i) green bonds, social or sustainable bonds issued by public or corporate issuers, and bonds linked to sustainable development ("sustainability-linked bonds"), or (ii) bonds issued by companies considered as being aligned with the United Nations Sustainable Development Goals (as listed below). The minimum levels of sustainable investments with environmental and social objectives are 1% and 3% of the fund's net assets, respectively.

An investment/issuer is aligned when at least one of the following three thresholds is reached:

- a. **Goods and services:** At least 50% of their revenue derives from goods or services linked to at least one of the following nine United Nations Sustainable Development Goals, out of 17: (1) No poverty, (2) Zero hunger, (3) Good health and well-being, (4) Quality education, (6) Clean water and sanitation, (7) Affordable and clean energy, (9) Industry, innovation and infrastructure, (11) Sustainable cities and communities and (12) Responsible consumption and production; or
- b. **Capital expenditure (CapEx):** At least 30% of capital expenditure is on business activities related to at least one of the following nine United Nations Sustainable Development Goals, out of 17: (1) No poverty, (2) Zero hunger, (3) Good health and well-being, (4) Quality education, (6) Clean water and sanitation, (7) Affordable and clean energy, (9) Industry, innovation and infrastructure, (11) Sustainable cities and communities and (12) Responsible consumption and production; or
- c. **Operations:**
 - i. The issuer is given “aligned” status, in terms of operational alignment, for at least three of the 17 United Nations Sustainable Development Goals, determined on the basis of evidence provided by the issuer regarding its policies, practices and objectives in line with these Sustainable Development Goals. “Aligned” status corresponds to an operational alignment score higher than or equal to +2 (on a scale from -10 to +10), as determined by the external rating provider selected by the management company; and
 - ii. The issuer has not been given “non-aligned” status, for operational alignment, with any of the 17 United Nations Sustainable Development Goals. “Non-aligned” status corresponds to an operational alignment score of below or equal to -2 (on a scale from -10 to +10), as determined by the external rating provider selected by the management company.

In 2023, 16.3% of the fund’s net assets were invested in sustainable investments, on average, based on quarter-end data. The sustainable investment levels with environmental and social objectives are 8.2% and 8.1% of the fund’s net assets respectively, on average, based on quarter-end data. Our definition of sustainable investment changed in July 2023 to include the alignment of operations with the SDGs and a modification of the alignment threshold for capital expenditure, which was increased from 30% to 50%. The average percentage of sustainable investments stated above therefore reflects the definition of sustainable investment in place at the time: using the previous definition for Q1 and Q2 and the current definition for Q3 and Q4 2023 respectively.

4) Active stewardship for bondholders: Companies’ environmental and social engagement efforts leading to an improvement in companies’ sustainable development policies are measured using the following indicators: (a) level of active engagement and voting policies, (b) number of engagement efforts, and (c) participation in shareholder (or bondholder) meetings. In 2023, we engaged with 60 companies at Carmignac level, and 8 companies at Carmignac Sécurité level.

5) Principal adverse impacts – PAIs: Moreover, as regards monitoring principal adverse impacts (“PAIs”), and in accordance with Annex 1 to Commission Delegated Regulation (EU) 2022/1288, the fund monitors 16 mandatory environmental and social indicators, and 2 optional indicators to demonstrate the impact of sustainable investments with respect to these indicators: greenhouse gas (GHG) emissions, carbon footprint, GHG intensity of investee companies, exposure to companies active in the fossil fuel sector, share of non-renewable energy consumption and production, energy consumption intensity per high impact climate sector, activities negatively affecting biodiversity-sensitive areas, emissions to water, hazardous waste and radioactive waste ratio, water usage and recycling (optional choice), violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises, lack of processes and compliance mechanisms to monitor compliance with UN Global Compact and OECD Guidelines for Multinational Enterprises, unadjusted gender pay gap, board gender diversity, exposure to controversial weapons, excessive pay ratio (optional choice). Where appropriate, sovereign issuers are monitored for violations of social norms and their GHG intensity.

In 2023, we replaced Impact Cubed with MSCI as our data provider for the monitoring of PAIs, as MSCI offered greater transparency and greater flexibility for the creation of our own tools using the raw data provided by MSCI. Please find below performance data with respect to principal adverse impact indicators for 2023, based on average quarter-end data, for the portfolio’s corporate bond components:

PAI Indicators	Based on data provided by the company	Fund	Hedging
Scope 1 GHG	Scope 1 GHG emissions	420698.30	80.10%
Scope 2 GHG	Scope 2 GHG emissions	31421.53	80.10%
Scope 3 GHG	From 1 January 2023, Scope 3 GHG emissions	2001971.26	80.10%
Total GHG	Total GHG emissions	2436350.38	80.10%
Carbon footprint	Carbon footprint	1052.77	80.10%
GHG intensity level	GHG intensity of companies	1071.82	89.34%
Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	23%	89.34%
Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and production of investee companies from non-renewable energy sources compared with renewable energy sources, expressed as a percentage	71%	65.04%
Energy consumption intensity per high impact climate sector – Total	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – Total	1.08	70.63%
Energy consumption intensity per high impact climate sector – NACE Sector A	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector A (Agriculture, forestry and fishing)	0.00	70.63%
Energy consumption intensity per high impact climate sector – NACE Sector B	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector B (Mining and quarrying)	1.66	70.63%
Energy consumption intensity per high impact climate sector – NACE Sector C	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector C (Manufacturing)	0.88	70.63%
Energy consumption intensity per high impact climate sector – NACE Sector D	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector D (Electricity, gas, steam and air conditioning supply)	4.20	70.63%
Energy consumption intensity per high impact climate sector – NACE Sector E	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector E (water supply, sewerage, waste management and remediation activities)	1.47	70.63%
Energy consumption intensity	Energy consumption in GWh per million EUR of revenue of	0.00	70.63%

per high impact climate sector – NACE Sector F	investee companies, per high impact climate sector – NACE Sector F (Construction)		
Energy consumption intensity per high impact climate sector – NACE Sector G	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector G (Wholesale and retail trade; repair of motor vehicles and motorcycles)	0.00	70.63%
Energy consumption intensity per high impact climate sector – NACE Sector H	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector H (Transportation and storage)	1.06	70.63%
Energy consumption intensity per high impact climate sector – NACE Sector L	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector – NACE Sector L (Real estate activities)	1.11	70.63%
Biodiversity	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	1%	79.21%
Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.00	0.10%
Hazardous waste	Tonnes of hazardous waste generated by investee companies per million EUR invested, expressed as a weighted average	1.96	36.28%
Water usage and recycling	Average amount of water consumed and recovered by the investee companies (in cubic metres) per million EUR of revenue	0.00	0.89%
Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00	90.85%
Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.20	78.54%
Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14%	24.02%
Board gender diversity	Average ratio of female to male board members in investee companies	37%	79.19%
Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00	79.29%
Excessive CEO pay ratio	Average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest-compensated individual).	79.77	55.15%
Greenhouse gas intensity (sovereign and supranational)	GHG intensity of investee countries (tonnes of CO ₂ e emissions per million EUR of the country's GDP)	353.96	74.63%
Social violations (sovereign and supranational)	Number of investee countries subject to social violations (as an absolute number and in proportion to the total number of countries receiving investments), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0.25	74.63%

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The fund invested at least 10% of its net assets in green, social or sustainable bonds, or sustainability-linked bonds, as well as in bonds issued by companies aligned with the United Nations Sustainable Development Goals.

As mentioned above, an investment/issuer is aligned when at least one of the following three thresholds is reached:

- i. **Goods and services:** At least 50% of their revenue derives from goods or services linked to at least one of the following nine United Nations Sustainable Development Goals, out of 17: (1) No poverty, (2) Zero hunger, (3) Good health and well-being, (4) Quality education, (6) Clean water and sanitation, (7) Affordable and clean energy, (9) Industry, innovation and infrastructure, (11) Sustainable cities and communities and (12) Responsible consumption and production; or
- ii. **Capital expenditure (CapEx):** At least 30% of capital expenditure is on business activities related to at least one of the following nine United Nations Sustainable Development Goals, out of 17: (1) No poverty, (2) Zero hunger, (3) Good health and well-being, (4) Quality education, (6) Clean water and sanitation, (7) Affordable and clean energy, (9) Industry, innovation and infrastructure, (11) Sustainable cities and communities and (12) Responsible consumption and production; or
- iii. **Operations:**
 - a. The issuer is given “aligned” status, in terms of operational alignment, for at least three of the 17 United Nations Sustainable Development Goals, determined on the basis of evidence provided by the issuer regarding its policies, practices and objectives in line with these Sustainable Development Goals. “Aligned” status corresponds to an operational alignment score higher than or equal to +2 (on a scale from -10 to +10), as determined by the external rating provider selected by the management company; and
 - b. The issuer has not been given the status of secular “non-aligned”, in terms of operational alignment, with any of the 17 United Nations Sustainable Development Goals. “Non-aligned” status corresponds to an operational alignment score of below or equal to -2 (on a scale from -10 to +10), as determined by the external rating provider selected by the management company.

These thresholds represent significant commitment from the issuer with respect to its contribution. To find out more about the United Nations sustainable development goals, please visit <https://sdgs.un.org/goals>.

In 2024, 31.9% of the fund’s net assets were invested in sustainable investments, on average, based on quarter-end data. The sustainable investment levels with environmental and social objectives are 15.3% and 16.6% of the fund’s net assets respectively, on average, based on quarter-end data. The proportion of green bonds, social or sustainable bonds issued by public or private issuers, and sustainability-linked bonds in 2024 was 9.3%, on average, based on quarter-end data.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The management company used the following mechanisms to ensure that the fund's responsible investments do not cause significant harm to any of the environmental or social sustainable investment objectives:

- 1) Reduction of the investment universe** (minimum 20% of the corporate bond component of the portfolio):
 - i) **Exclusions at management company level:** Unsustainable activities and practices are identified using an approach based on international standards and rules in the following areas: (a) controversies concerning the OECD Guidelines, the International Labour Organization (ILO) Declaration on Fundamental Principles and Rights at Work, and the principles of the United Nations Global Compact, (b) controversial weapons, (c) thermal coal production, (d) energy producers, (e) tobacco, (f) adult entertainment.
 - ii) **Negative screening specific to the fund:** Bond portfolio positions with a global START score of "D" or "E" (on a rating scale from "E" to "A") are excluded from the fund's investment universe. Issuers with a START score of "E" (on a rating scale from "E" to "A") on environmental or social pillars are excluded from the fund's investment universe. Issuers with a global MSCI rating of "CCC" or "B" (on a scale from "C" to "AAA") are excluded from the fund's investment universe. Issuers with a global MSCI rating of "CCC" or "B" (rating of "E" to "A") may re-enter the fund's investment universe if they have a START rating of "C" or higher.
- 2) Active stewardship for bondholders:** ESG engagement efforts with companies, contributing to a heightened awareness and improvement in companies' sustainable development policies, are measured using the following indicators: (a) level of active engagement and voting policies, (b) number of engagement efforts, and (c) participation in shareholder or bondholder meetings.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Indicators for adverse impacts are monitored on a quarterly basis. Adverse impacts are identified based on severity. After discussion with the investment team concerned, a plan of action including an execution schedule is drawn up.

In general, dialogue with the company is the preferred plan of action in order to influence the mitigation of adverse impacts by the company concerned. In such cases, engagement with the company is included in Carmignac's quarterly engagement plan, in accordance with Carmignac's engagement policy. Divestment may be an option, with an exit strategy determined in advance within the limits of this policy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The management company applies a screening process for controversies regarding the OECD Guidelines for Multinational Enterprises and the United Nations Guiding Principles on Business and Human Rights to all of the fund's investments.

The management company acts in accordance with the principles of the United Nations Global Compact (UNGC), the International Labour Organization (ILO) Declaration on Fundamental Principles and Rights at Work and the Organisation for Economic Co-operation and Development (OECD) guidelines allowing multinational enterprises to assess the standards applicable to them, including, but not limited to, violations of human rights, employment law and standard practices relating to climate.

The fund applies a controversy screening process to all its investments. Companies implicated in major controversies regarding the environment, human rights and international employment law, among other infractions, are excluded. The screening process identifies controversies on the basis of the OECD Guidelines for Multinational Enterprises and the principles of the United Nations Global Compact. This is generally referred to as "standards-based screening" and it includes restrictive screening controlled and measured using Carmignac's proprietary ESG system "START". Company controversies are researched and rated using data extracted from the ISS ESG database.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

How did this financial product consider principal adverse impacts on sustainability factors?

The management company is committed to applying the regulatory technical standards (RTS) referred to in Annex 1 of Delegated Regulation (EU) 2022/1288, which define 16 mandatory environmental and social indicators, and two optional indicators to demonstrate the impact of sustainable investments with respect to these indicators: greenhouse gas (GHG) emissions, carbon footprint, GHG intensity of investee companies, exposure to companies active in the fossil fuel sector, share of non-renewable energy consumption and production, energy consumption intensity per high impact climate sector, activities negatively affecting biodiversity-sensitive areas, emissions to water, hazardous waste and radioactive waste ratio, water usage and recycling (optional choice), violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises, lack of processes and compliance mechanisms to monitor compliance with UN Global Compact and OECD Guidelines for Multinational Enterprises, unadjusted gender pay gap, board gender diversity, exposure to controversial weapons, excessive pay ratio (optional choice). Sovereign issuers are monitored for violations of social norms with respect to their GHG intensity.

As part of its PAI strategy, Carmignac identifies companies that are performing worse than the benchmark on PAI indicators. Our third-party data provider MSCI allows us to track the impact of our funds for each PAI.

The fund's PAI values are compared against the values for the reference benchmark. If one of the fund's PAIs underperforms the reference benchmark beyond a certain threshold, we look for the companies that contributed the most to the underperformance of the PAI in question. These companies are considered to be outlier stocks.

Identifying companies that are performing worse than the index in terms of PAI allows us to engage in dialogue with the companies to ensure that they are committed to reducing their impact. We identified TotalEnergies as one of the main contributors to Carmignac Sécurité's underperformance on the carbon footprint performance indicator in 2023.

This led us to make engagement efforts with TotalEnergies in 2024. We had a call with the company to help inform our voting decision on its climate transition strategy. Topics covered included its transition strategy and the capex set aside for the development of renewable energies.

What were the top investments of this financial product?

Please find below the top 15 investments for 2024 based on average month-end data for the bond component of the portfolio:

Largest investments	Sector	% Assets	Country
United States 0.12% 15/04/2026	Energy	3.62%	United States
Spain 0.65% 30/11/2027	Energy	2.82%	Spain

Source: Carmignac, 31/12/2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

At least 90% of the fund's investments are intended to attain the environmental or social characteristics it promotes, in accordance with the binding elements of the investment strategy. In 2024, the ESG analysis coverage rate was 96.7% of the securities in the portfolio (excluding cash and derivatives), on average, based on quarter-end data.

Minimum share of sustainable investments:

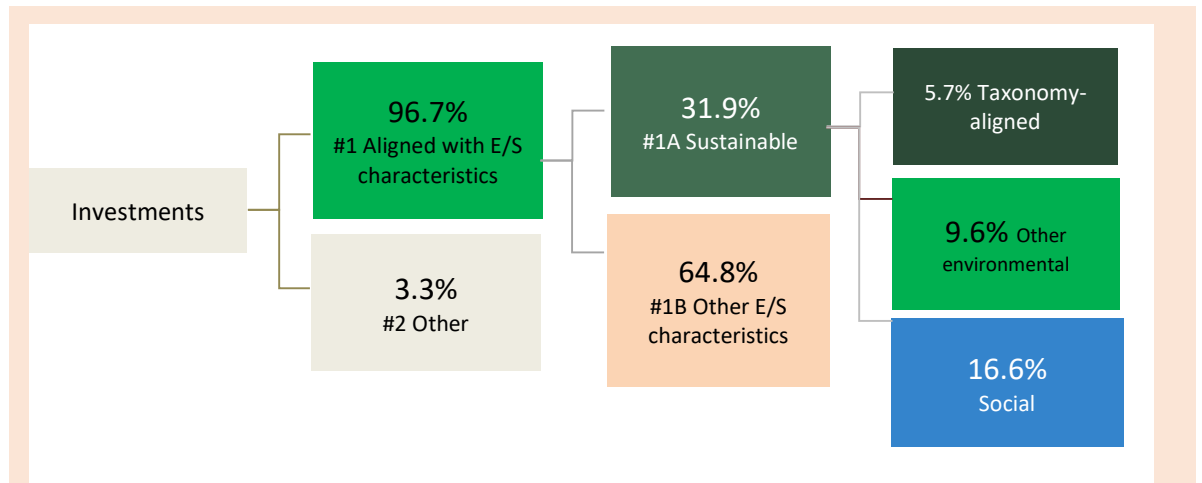

The fund invests at least 10% of its net assets in green, social or sustainable bonds, or sustainability-linked bonds, as well as in bonds issued by companies that positively align with the United Nations Sustainable Development Goals. The minimum levels of sustainable investments with environmental and social objectives are 1% and 3% of the fund's net assets, respectively. As well as making sustainable investments accounting for at least 10% of the net assets, the fund may target companies whose goods and services, capex and operations are not aligned with the Sustainable Development Goals taken into consideration.

In 2024, sustainable investments accounted for 31.9% of the fund's net assets, on average, based on quarter-end data. The minimum levels of investments promoting E/S characteristics, and with environmental and social objectives, will be 1% and 3% of the fund's net assets, respectively. In 2024, these proportions were 15.3% and 16.6% of the fund's net assets respectively, on average, based on quarter-end data. The proportion of green, social or sustainable bonds issued by public or corporate issuers, and bonds linked to sustainable development ("sustainability-linked bonds") in 2024 was 9.3%, on average, based on quarter-end data.

The list includes investments constituting the financial product's largest holdings over the reference period, namely:

Share of #2 Other investments:

In addition to cash and derivatives (which may be used for the purposes of efficient portfolio

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments

management and/or hedging and/or exposure, as applicable), this category includes investments in corporate bonds or in sovereign bonds that are not classed as sustainable investments. Such investments are carried out in strict compliance with the fund's investment strategy and in order to implement the fund's investment strategy. All these investments are subject to ESG analysis (including via our proprietary ESG model for sovereign bonds). For corporate bonds, minimum safeguards are assessed to ensure that their business activities comply with the OECD Guidelines for Multinational Enterprises and the United Nations Guiding Principles on Business and Human Rights. These instruments are not used to attain the environmental or social characteristics promoted by the fund. In 2024, this proportion was 3.3% of the fund's net assets, on average, based on quarter-end data.

● **In which economic sectors were the investments made?**

Please find below the main economic sectors in which investments were made in 2024, based on average month-end data, for the bond component of the portfolio:

Economic sectors	% Assets
Sovereign bonds	32.54%
Finance	29.91%
Energy	12.91%
Oil, gas and fuel	8.85%
Oil & Gas Equipment & Services	4.07%
Utilities	5.20%
Consumer discretionary	5.15%
Industry	4.41%
Property	3.13%
Telecom Services	2.40%
Materials	1.78%
Healthcare	1.01%
Consumer Staples	0.79%
IT	0.78%

Source: Carmignac, 31/12/2024

● **To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The fund has an environmental objective linked to the Sustainable Development Goals and not to the European Taxonomy. In 2024, its alignment with the EU taxonomy was 5.7%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes:

In fossil gas

In nuclear energy

No:

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies;
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy;
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, sovereign bonds consist of all sovereign exposures.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● What was the share of investments made in transitional and enabling activities?

N/A

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In 2023, its alignment with the EU Taxonomy was 2.75%.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

In 2024, sustainable investments with an environmental objective that are not aligned with the EU Taxonomy accounted for 9.6% of the net assets, on average, based on quarter-end data.

What was the share of socially sustainable investments?

In 2024, sustainable investments with a social objective accounted for 16.6% of the net assets, on average, based on quarter-end data.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remainder of the portfolio (i.e. beyond the minimum share of 90%) may also promote environmental and social characteristics but is not systematically covered by ESG analysis. These assets may include securities for which ESG analysis may be carried out after the financial instrument in question is acquired by the fund. Cash (and equivalent instruments) and derivatives (used for hedging or exposure purposes) are also included under “#2 Other”.

At corporate issuer level, investments that are not sustainable investments are assessed to ensure compliance with global standards on environmental protection, human rights, employment practices and anti-corruption measures through controversy screening (“standards-based” approach). These investments are analysed on the basis of the minimum safeguards in place to ensure that their business activities comply with the OECD Guidelines for Multinational Enterprises and the United Nations Guiding Principles on Business and Human Rights.

Environmental, social and governance considerations are integrated into the instruments enabling synthetic exposure based on the framework applied to derivative instruments, as detailed below. The approach adopted will depend on the type of derivative instrument used by the fund: a derivative on a single underlying or a derivative on an index.

Derivatives on a single underlying

Derivatives offering short exposure to a single underlying security are not subject to additional checks related to ESG. The underlying issuer may feature on the fund’s exclusion lists, given that signalling a lack of confidence in a company with poor ESG characteristics by short selling the security is considered reasonable when attempting to balance the investment objectives of holders. These instruments are not subject to a START rating.

Derivatives offering long exposure to a single underlying issuer are subject to the same ESG integration policy as physical long positions in shares and/or in corporate debt, as applicable. These instruments must satisfy the same ESG integration criteria as those described in this appendix.

Derivatives on an underlying index

Derivatives offering exposure to an index, whether long or short, may be subject to additional checks to ensure their eligibility as a fund asset, depending on their purpose.

- Derivatives used for the purposes of hedging and efficient portfolio management: Index derivatives acquired by the fund for hedging purposes are not analysed on the basis of ESG criteria.
- Derivatives used for the purposes of exposure: index derivatives may be acquired for the purposes of exposure, provided that they present the following characteristics and are held for a period of greater than one month:
 - o Concentrated index (five components or less): The index must not include components that are included on the fund's exclusion list.
 - o Broad index (more than five components): The significant majority of the index (>80% of exposure) must comprise companies that are not included on the fund's exclusion list.

In addition, the weighted average ESG rating of the index must be higher than BBB (MSCI) or C (START), and ESG coverage of the index (MSCI or START) must be above 90%.

The fund's reference indicator remains outside the scope of application of this framework that is applicable to index derivatives, and is not taken into account for ESG purposes.

The fund applies a netting calculation (netting a long position against equivalent short positions in the relevant issuer) in order to measure adverse impacts.

All of the fund's assets (excluding cash and derivatives) are subject to sectoral and standards-based exclusions guaranteeing minimum environmental and social safeguards.

Moreover, the exclusion process, the lack of significant harm, and monitoring of adverse impacts apply to all fund assets.

In 2024, no derivatives were used to achieve the environmental and social characteristics promoted by the fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

ESG integration

In 2024, we introduced a new model in some of our funds to meet the objectives of the Paris agreements. The portfolio's climate targets have been set to reduce greenhouse gas emissions by 50% in 2030, 70% in 2040 and to reach net zero by 2050. The reference year for the portfolio's climate targets is 2018.

In 2024, we improved our universe reduction process by reweighting each issuer in the fund's initial universe. The investment universe is reweighted in order to eliminate capitalisation, geographical and sector biases which could lead to significant differences between the composition of these indices and that of the fund's portfolio.

In 2024, we also formalised our ESG integration process for collateralised loan obligations (CLOs). ESG analysis is carried out for a significant proportion of CLOs. Ad hoc analysis of the environmental and/or social characteristics of eligible securitisation vehicles is conducted by the portfolio manager. Funds using this model cannot invest in lower-rated instruments.

We have developed and introduced a holistic approach to assessing sustainable bonds, including green bonds, social bonds, sustainability bonds and sustainability-linked bonds (SLBs). These bonds are no longer considered as sustainable investments by default; they must meet certain specific criteria following an ESG analysis in order to be considered as SFDR "sustainable investments".

We have established a new framework for integrating ESG analysis into the derivative exposures of all our funds. Underlyings for single-asset derivatives and index derivatives held for exposure purposes are now subject to ESG analysis. Derivatives on a single underlying asset held for exposure purposes are now subject to the same ESG integration criteria as long positions and the ESG integration criteria have been developed as described in the document above for index derivatives. Derivatives held for hedging or efficient portfolio management purposes can still be held in the portfolio without being subject to ESG analysis. The policy was developed and implemented by the team of sustainable investment specialists and is overseen by the company's risk function.

Throughout 2024, we improved our proprietary model by adding new environmental and governance KPIs. This new proprietary model will be launched in 2025.

ESG transparency and reporting

We have continued to provide comprehensive information on our approach. Our ESG policies and reports can be found on the Carmignac website: <https://www.carmignac.com/en-gb/sustainable-investment/policies-and-reports>

In our TCFD 2024 report, we have introduced a new metric of the physical risks faced by businesses: Climate VaR (climate value at risk). Climate VaR quantifies the economic value potentially at risk depending on different climate scenarios. Publication of the Climate VaR is available as part of our wider TCFD report and can be viewed at: https://carmidoc.carmignac.com/SRICA_UK_en.pdf

Carmignac recognises the importance of “walking the talk”. That is why we published our Corporate Social Responsibility (CSR) policy in 2024. Our CSR approach is based on 5 key pillars: our operational environmental footprint, promoting an engaged workforce and an inclusive environment, our duty to society, our commitment to the arts through the Carmignac Foundation, and our responsible business conduct. Our CSR policy can be consulted at the following address: https://carmidoc.carmignac.com/CSR_FR_en.pdf.

In 2024, we also overhauled our exclusion policy to further increase transparency for our investors. The policy now includes the justification for each exclusion, the revenue threshold used for these exclusions and a table detailing the funds affected by the exclusion criteria. In addition, we have clarified our integration of the UN Guiding Principles on Business and Human Rights into our controversy monitoring processes. Our exclusion policy is available at the following address https://carmidoc.carmignac.com/SRIEXP_UK_en.pdf.

Commitments

Objective of 100% of votes: At Carmignac level we succeeded in participating in 98.15% (95% in 2023) of all the possible votes at annual general meetings in 2024. The fund had no voting rights in 2024.

Stewardship Code: We have once again been approved by the FRC as a signatory to the Stewardship Code by complying with all the principles, as formalised in our annual Stewardship Report: https://carmidoc.carmignac.com/SWR_FR_en.pdf.

Regulatory consultation: We have participated in roundtable discussions on ESG issues facing our industry, our products and the sector as a whole, and have also contributed to consultations and discussions led by our regulators, through the working groups of our fund associations such as AI UK, Alfi Luxembourg and AFG, France.

Carmignac believes that direct engagement and collaborative engagement are worthwhile, and that a combination of the two leads to the most impactful and effective management. It is by working together that investors can have the most effective influence on companies with regard to important ESG matters, including market-wide systemic risks, and ultimately help to improve the way the markets operate. We stepped up our participation in Climate 100+ with this in mind, particularly for the collective engagement with Pemex, as holder of the company's bonds. In 2024, we joined the Nature 100+ collaborative commitment initiative on biodiversity-related issues. We have also joined the WBA collective impact coalition on ethical AI.

With regard to engagement specifically, we have a fiduciary duty to fully exercise our rights as shareholders and engage with the companies in which we invest. Dialogue is maintained by the financial analysts, portfolio managers and ESG team. We believe that our engagement allows us to better understand how companies manage their non-financial risks and significantly improve their ESG profile, while creating long-term value for our clients, society and the environment. Each interaction covers one of the following five topics: 1) ESG risks, 2) an ESG theme, 3) a desired impact, 4) controversial behaviour, or 5) a voting decision at a General Meeting. Carmignac may collaborate with other shareholders and bondholders when doing so would help influence the actions and governance of companies held in the portfolio. In order to ensure that the company correctly identifies, anticipates and manages any potential or confirmed conflict-of-interest situation, Carmignac has put in place and maintains policies and guidelines. For more information on our engagement policies, please visit the website.

In 2024, Carmignac as a whole conducted 70 engagement efforts with 54 companies and 1 sovereign entity on specific ESG issues, and the Carmignac Sécurité fund engaged with 11 companies.

For example, we engaged with Accor SA in 2024.

In line with our policy on engagement, Accor SA's high staff turnover rate led us to commence this engagement effort. Carmignac asked the company to broaden the scope of data reported on health and safety issues, staff turnover and fatal accidents in managed hotels.

Management did not consider the high staff turnover figures to be a cause for concern, as they are in line with industry averages and most staff are recruited from franchised hotels. However, management acknowledged that this issue could pose a reputational risk, given that franchises use the company's brand. Management presented some of the measures it has taken to train and retain employees.

In response to Carmignac's request to disclose additional information on health and safety, management indicated that it would consider amending the key performance indicators.

Carmignac has also asked the company to provide us with more information on the SLBs we hold in a number of our funds. This conversation enabled us to obtain more information on the company's progress towards meeting the SLB targets, and gave us the opportunity to express our views on how the company reports its performance against these targets.

CARMIGNAC
INVESTING IN YOUR INTEREST

ENERGY AND CLIMATE LAW

ARTICLE 29

Carmignac Sécurité

I. Information on the strategy for alignment with the international climate change mitigation targets set out in the Paris Agreement

In January 2020, Carmignac became a signatory to the Task Force on Climate-related Financial Disclosures (TCFD) and we have built our Climate Report and our commitments on this subject around the four pillars of the TCFD, namely Governance, Strategy, Risk Management and Performance Indicators. Carmignac measured the physical and transition climate risks of its portfolios in 2024 and will publish its TCFD reports in June 2025 as required by UK regulations.

To go further, and in the context of the Energy-Climate Law, Carmignac Gestion SA, which includes the Carmignac Sécurité fund, intends to frame its climate policy with reference to Article 2 of the Paris Agreement (2015), which states:

"a) Keep global average temperature increases well below 2°C above pre-industrial levels and pursue efforts to limit the temperature increase to 1.5°C above pre-industrial levels, recognising that this would significantly reduce the risks and impacts of climate change;
b) Enhance the ability to adapt to the adverse effects of climate change and promote climate resilience and low greenhouse gas emissions development, in a manner that does not threaten food security; and c) Make financial flows consistent with a pathway towards low greenhouse gas emissions and climate-resilient development."

Secondly, in light of Article 4 of the Paris Agreement, the Carmignac Group is taking the initiative as an asset manager and contributing to climate change mitigation both in our operations as a company and in the companies in which we invest. With investments in both developed and emerging markets, we recognise that developing countries are not progressing at the same pace, and we are committed to using our influence to encourage best practices, clarity and transparency among the companies in which we invest with regard to their climate policies. The Carmignac Group relies heavily on the TCFD's analytical framework to engage with companies to understand their governance, strategy, risk management and measures in place in relation to their climate ambitions, targets and impacts. The Carmignac Group recognises that reducing carbon emissions in companies' operations, products and services, as well as direct and indirect upstream and downstream emissions, can be a long-term process. That is why, as an entity of Carmignac Gestion SA, in its capacity as management company of Carmignac Sécurité, we are seeking to commit to a roadmap detailing a progressive approach to reducing emissions over the long term, with emission targets set in line with the European Union's 2030 targets, and then every five years with the ambition of achieving net zero emissions by 2050. A detailed description of this roadmap will be provided in this report. In 2024, we implemented our approach to measure the alignment of our strategy with the Paris Agreement, which had been developed in 2023. This approach will be described in the report below.

a. Carmignac Gestion SA's intentions to integrate the quantitative alignment targets of the Paris Agreement into the Energy and Climate Law

The following actions were taken in 2024 as part of our strategy to align with the Paris Agreement:

- Application of a process to monitor the portfolio's alignment with the Paris Agreement over different periods, with different market conditions, inflation levels, oil prices and portfolio constructions. At the end of 2024, 23.9% of CGSA's assets were aligned with the 1.5°C scenario of the Paris Agreement. These calculations of alignment with the Paris Agreement measured in degrees are applied to all Carmignac Group portfolios, including equity, bond and diversified funds.
- Implementation of the impact of physical and transition-related climate risks in carbon alignment objectives.
- Gradual introduction of Scope 3 carbon emissions measurement as data coverage and accuracy improve. At the end of 2024, the fund's Scope 3 emissions were 2,286,470.67 TCO2e based on the average of the data at the end of the quarter.
- In 2024, we began monitoring our funds using a new approach to alignment with the Paris Agreement, which was developed in 2023. As part of this, we set a carbon emissions reference year for Carmignac Gestion SA (as the consolidation entity for the funds for which Carmignac Gestion SA is the title company) and the other funds included in this report as at 31 December 2024. The reference year chosen for our Paris Agreement alignment strategy is 2018. This new approach was added to the prospectuses of the relevant funds in 2024.
- In 2024, Carmignac developed a proprietary methodology to determine whether portfolio companies are taking sufficient measures for their climate transition.

b. Our quantitative targets for 2030

In order to structure our approach to the Paris Agreement alignment objectives, we have set ourselves the following objective for the year:

- Maintain a trajectory in line with the emission targets set for 2030, 2040 and 2050.

OBJECTIVE: Maintain a trajectory of direct and indirect greenhouse gas emissions in line with the emission reduction targets set every 10 years from 2030 compared to 2018.

Emissions reduction targets					
Date	2030	2035	2040	2045	2050
Emissions reduction targets vs. 2018	-50%	-60%*	-70%	-85%*	-100%

*These interim targets have been set to ensure that funds are on track to meet the 2040 and 2050 targets. However, these targets are not binding.

FIGURE 1: DECARBONISATION TRAJECTORY OF CARMIGNAC GESTION SA'S MUTUAL FUNDS COMPARED TO 2018, THE FUND'S BENCHMARK YEAR

Decarbonisation trajectory

c. Internal methodology used to assess the alignment of the investment strategy with the Paris Agreement

In 2024, we used the following methodology to assess the alignment of the investment strategy with the Paris Agreement.

1. The reference year for the portfolio's climate objectives is 2018.
2. To monitor these targets, the sub-fund uses an aggregation of the financed emissions of each individual company in the portfolio, which are calculated using the following formula:

(market value of the investment / value of the company, including cash) x (Scope 1 GHG emissions + Scope 2 GHG emissions).

3. The portfolio's emissions are the sum of the aggregate emissions of each company in the portfolio.
4. This figure is then compared to the fund's historical emissions, which are calculated based on the fund's current composition.
5. The difference between emissions in year T and portfolio emissions in 2018 divided by portfolio emissions in 2018 corresponds to the portfolio's emissions trajectory.

d. The impact of Carmignac's climate policy on the investment process

COMMITMENT

Carmignac is actively committed to climate issues, using the TCFD framework as a basis for its commitments and monitoring of climate-related objectives.

MONITORING

Total carbon emissions and carbon intensity are monitored at all times by investment managers, analysts and the responsible investment team using the Global Portfolio Monitoring system, a real-time dashboard of portfolio positions, financial and non-financial data. This enables real-time management of the carbon footprint relative to the fund's benchmark.

REPORT

Since 2023, the responsible investment team has been working with the investment teams to improve expertise in carbon footprint monitoring. The responsible investment team has implemented a quarterly portfolio check, which has been presented to the fund manager since the first quarter of 2024.

These checks include various climate data such as ClimateVar, PAIs, CO2 emissions including scope 3, revenue alignment with the European taxonomy and the percentage of the portfolio aligned with the Paris Agreement.

ALIGNMENT WITH THE PARIS AGREEMENTS

We have designed a new approach, which will be implemented in 2024, to measure the alignment of our investment strategy with the Paris Agreement. This approach calculates the fund's current and historical emissions based on the current portfolio composition. We chose 2018 as the reference year to have enough historical data to make the model more comprehensive. The calculation shows the decarbonisation rate of the companies in the fund since the reference year. To align with the net zero emissions target for 2050, we have set the following emission reduction targets compared to 2018: -50% by 2030, -70% by 2040, and net zero by 2050. The fund's decarbonisation figures will initially be measured on a quarterly basis to ensure that the fund is on track to meet its first target in 2030.

e. Policy in place for a phased exit from coal and unconventional hydrocarbons

PLAN TO PHASE OUT COAL AND UNCONVENTIONAL ENERGIES

In line with growing concerns about the environment and the risk of underperforming or stranded assets, we have had a policy of excluding coal mines since 2018. Carmignac also extended its exclusion threshold for coal-fired power generation companies in its SRI fund range to all Carmignac funds in October 2020. Last but not least, Carmignac has committed to completely divesting from all coal-related investments by 2030.

STRATEGY FOR PHASING OUT COAL BY 2030

Carmignac is committed to phasing out all coal-related investments in OECD countries and the rest of the world in the long term. If future investments related to coal are permitted under Carmignac's exclusion policy, a total withdrawal from coal mines and coal-fired power generation companies will be implemented by 2030, with an effective tolerance threshold of 0%.

COAL MINING

Very limited investment opportunities and no financing for new mines. Since 2018, Carmignac has excluded companies that generate more than 10% of their revenue from thermal coal mining or produce more than 20 million tonnes of thermal coal. In exceptional cases, we may consider investing

in mining companies that produce more than 20 million tonnes of thermal coal per year, but whose core business is not coal mining and which contribute positively to the energy transition through other commercial activities. Through our equity and corporate debt investments, we are committed to not directly financing companies that plan new coal mining projects. If, through acquisitions, a company in our portfolio is involved in new coal mining projects, Carmignac will divest from these companies within a defined timeframe. In light of the climate emergency, Carmignac encourages companies to make credible commitments to reduce their dependence on coal within a rolling two-year period in order to align their activities with the Paris Agreement.

COAL-FIRED POWER GENERATORS

Commitment to companies to achieve the lowest possible CO2 emissions. Carmignac recognises the importance of encouraging companies to reduce their dependence on coal-fired power generation in order to align their activities with the Paris Agreement. To this end, we have adopted the criterion using gCO2/kWh, following the threshold recommended by the International Energy Agency (IEA) to keep global temperature rise below 2 degrees, as set out in the Paris Agreement:

	2023	2024	2	2	20	2028
Max. gCO2/kWh	366	326	291	260	232	207

EXIT FROM UNCONVENTIONAL ENERGY

Carmignac will strive to implement a divestment plan for unconventional energy for its investments across the entire fund range, in line with the 2030 coal divestment plan. However, for investments in non-OECD countries, a 2040 exit plan is more appropriate given the greater dependence on hydrocarbons in developing countries and the slower pace of transition.

II. Information on the strategy for alignment with long-term biodiversity goals:

a. Our biodiversity objectives

At the Carmignac Group level, we recognise the importance of taking biodiversity issues into account and the value of raising awareness among financial players about issues related to biodiversity loss.

Carmignac fully understands the central role of nature, embodying biodiversity and ecosystems, as essential to human existence and a good quality of life. However, the weight of growing populations and their environmental impact has unfortunately not had the same virtues.

As the 2019 IPBES report so aptly describes:

"In most places, people today receive more food, energy and materials than ever before, increasingly at the expense of nature's ability to provide these resources in the future, and frequently undermining nature's many other contributions, ranging from regulating water quality to providing a sense of belonging. The biosphere, on which humanity as a whole depends, is being altered to an unprecedented degree at all possible scales. Biodiversity – the diversity within

species, between species and of ecosystems – is declining faster than ever before in human history."

Carmignac has taken stock of this deterioration in order to frame its biodiversity policy within its investments, with reference to the objectives of the 1992 Convention on Biological Diversity:

1.

LA CONSERVATION DE LA DIVERSITÉ BIOLOGIQUE

2.

L'UTILISATION DURABLE DES ÉLÉMENTS CONSTITUTIFS DE LA DIVERSITÉ BIOLOGIQUE

3.

LE PARTAGE JUSTE ET ÉQUITABLE DES AVANTAGES DÉCOULANT DE L'UTILISATION DES RESSOURCES GÉNÉTIQUES

In order to raise awareness of the biodiversity risk inherent in our investments in a global universe across three main asset classes (equities, corporate debt and sovereign debt), Carmignac has drawn on the work carried out by the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES).

Thanks to their assessments, political support, capacity building and knowledge sharing, communication and awareness raising, we have been able to identify the five pressures on biodiversity survival as defined by IPBES: land and sea use change, direct exploitation of organisms, climate change, pollution and invasive alien species.

Source: https://ipbes.net/sites/default/files/2020-02/ipbes_global_assessment_report_summary_for_policymakers_fr

Explanation of the IPBES report:

The summary above shows examples of declines observed in nature worldwide, highlighting the loss of biodiversity caused by direct and indirect drivers of change.

Direct factors (changes in land and sea use, direct exploitation of organisms, climate change, pollution and invasive alien species) result from a combination of deep-rooted societal causes. These causes can be demographic (e.g. human

population dynamics), socio-cultural (consumption patterns), economic (trade), technological or related to institutions, governance, conflicts and epidemics. These are indirect factors, which are themselves underpinned by societal behaviours and values. The coloured bands represent the relative global impact of direct factors on (from top to bottom) terrestrial ecosystems, freshwater ecosystems and marine ecosystems, based on an estimate from a global systematic review of studies published since 2005. Land and sea use change and direct exploitation account for more than 50% of the global impact on terrestrial, marine and freshwater ecosystems, but each factor has a dominant influence in certain contexts. The circles illustrate the magnitude of negative anthropogenic impacts on different aspects of nature for various time scales, based on a global synthesis of indicators. ”

b. Carmignac Sécurité's exposure to biodiversity-related risks

Through our strategy for addressing key negative impacts, we are committed to measuring the impact of companies in our portfolios and our exposure to biodiversity-related risks. More specifically, in 2022, we measured on a quarterly basis the activities that have a negative impact on areas that are sensitive in terms of biodiversity. In addition, several PAIs (Principal Adverse Impacts) indicators, including tonnes of water discharges generated by the companies in which we invest, enable us to gradually take biodiversity issues into account.

The proportion of assets under management exposed to biodiversity-related risks is presented in the table below (as at 31 December 2024):

	Exposure to biodiversity-related risks	Fund assets under management (in millions of euros)	Assets under management at risk (in millions of euros)
Carmignac Sécurité	1.1	4,612	607

c. How we take biodiversity risks into account in our investment strategy

As part of our strategy to align with long-term biodiversity objectives, we have approached various data providers to enable us to determine more gradually the impact on biodiversity of the underlying investments in our portfolio range. However, analyses are still ongoing. We have identified a significant challenge in assessing the impact of investment decisions on biodiversity due to a lack of data, as quantifying biodiversity losses in financial terms and identifying investments that support biodiversity is less well understood than the fight against global warming.

In order to make this issue concrete and operational within our portfolios, we have decided to define a strategy based on a concrete measurement and a target for 2030. Our roadmap is based on the following pillars:

1. Deepening our ESG approach based on taking environmental issues into account:

- ✓ Universe reductions:
 - Excluding companies with a START score of "E" on the environmental pillar from its investment universe
- ✓ Positive screening:
 - The fund invests at least 10% of its net assets in green bonds, social or sustainable bonds issued by public or private issuers, and sustainability-linked bonds, or in bonds issued by companies that derive at least 50% of their revenue from goods and services related to, and devote at least 30% of their capital expenditure to, activities that are genuinely aligned with one of the nine (out of a total of 17) United Nations Sustainable Development Goals, or whose operations are aligned with at least three of the 17 United Nations Sustainable Development Goals (see <https://sdgs.un.org/goals>), including the "clean water and sanitation" and "clean energy" goals, which are aligned with our biodiversity . The minimum levels of sustainable investments with environmental objectives are 1% of the Sub-Fund's net assets.
- ✓ Review of the indicators on our ESG START research platform as part of its improvement and alignment with the PAIs, particularly those related to biodiversity
- ✓ Targeted commitments for companies involved in biodiversity controversies.

2. **Identification of an effective and available impact measure for our entire investment universe:**

We have chosen a measure that aggregates the results of a negative filter. This filter is determined on the basis of the areas of activity of greatest concern in terms of biodiversity:

- a. Companies that produce raw materials contributing to deforestation (palm oil, soy, beef and wood); or
- b. Companies that use commodities contributing to deforestation (palm oil, soy, beef and wood); or
- c. Companies that have been involved in controversies related to deforestation; or
- d. Companies that operate in or near biodiversity-sensitive areas; or
- e. Companies that have been involved in controversies with a serious or very serious negative impact on the environment.

We recognise that this measure is incomplete but consider it to be the most widely available data currently available. We reserve the right to change our choice of key biodiversity indicator as the market architecture in this area improves.

III. Information on how environmental, social and governance criteria are taken into account in risk management:

Carmignac takes environmental, social and governance criteria into account in its risk management. For more details on how Carmignac manages sustainability risks for all its funds, including Carmignac Sécurité, please refer to the "Article 29 – LEC" report at the Carmignac Gestion entity level.
